STORMWATER FACILITIES ACKNOWLEDGMENT
I / WE, THE LANDOWNER(S)
MY/OUR HEIRS AND ASSIGNS, ACKNOWLEDGE THE STORMWATER MANAGMENT SYSTEM TO BE A PERMANENT FACILITY WHICH CAN BE ALTERED OR
REMOVED ONLY AFTER APPROVAL OF A REVISED PLAN BY THE FERGUSON TOWNSHIP BOARD OF SUPERVISORS AND THAT THE STORMWATER MANAGE-
MENT SYSTEM IS MAINTAINED IN ACCORDANCE WITH THE RECORDED STORMWATER MANAGEMENT OWNERSHIP AND MAINTENANCE AGREEMENT
(RB PG).
OWNER BY
TOWNSHIP ENGINEER
STORMWATER CERTIFICATION
I,, HAVE REVIEWED THIS STORMWATER MANAGEMENT PLAN IN ACCORDANCE WITH THE DESIGN
STANDARDS AND CRITERIA OF THE FERGUSON TOWNSHIP STORMWATER MANGEMENT ORDINANCE.
STORMWATER CERTIFICATION
I,, HEREBY CERTIFY THAT THE STORMWATER MANAGEMENT PLAN MEETS ALL DESIGN STANDARDS
AND CRITERIA OF THE FERGUSON TOWNSHIP STORMWATER MAGANGEMENT ORDINANCE.
DESIGN ENGINEER
CERTIFICATION
I, <u>,HE</u> REBY CERTIFY THAT THIS LAND DEVELOPMENT MEETS ALL DESIGN REQUIREMENTS OF
THE SUBDIVISION AND LAND DEVELOPMENT ORDINANCE, ZONING ORDINANCE AND ALL OTHER APPLICABLE CHAPTERS OF THE FERGUSON
TOWNSHIP CODE.
FIRE MARSHALL CERTIFICATION
I HAVE REVIEWED AND HEREBY CERTIFY THAT THE LOCATION OF FIRE LANES AND FIRE HYDRANTS SHOWN ON THIS PLAN ARE ADEQUATE.

SECTION 403.Q)
PROJECT NARRATIVE:
WHITEHALL ROAD REGIONAL PARK PHASE 1 INCLUDES THE SITE LAYOUT, GRADING, UTILITY INSTALLATION, AND STORMWATER MANAGEMENT FOR
APPROXIMATELY 54.20 ACRES OF THE 100 ACRE PROPERTY. THIS PROJECT WILL PROVIDE THE FOLLOWING AMENITIES: 4 RECTANGULAR GRASS PLAYING
FIELDS (TWO OF THE FIELDS ARE DESIGNED WITH SYNTHETIC TURF AS AN ALTERNATE), TWO GRASS PRACTICE FIELDS, ALL SEASON PAVILION
(CONCESSIONS, RESTROOMS, GATHERING AREA), PLAYGROUND, PARK STORAGE BUILDING, GRAVEL TRAIL NETWORK, PAVED ENTRANCE DRIVEWAY,
CONCRETE SIDEWALKS, AND TWO PARKING LOTS AND LANDSCAPING. THERE IS AN EXISTING WOODED AREA THAT WILL BE RETAINED ON THE SITE.
STORMWATER MANAGEMENT WILL CONSIST OF FOUR PRIMARY STORMWATER MANAGEMENT AREAS AND NUMEROUS VEGETATED SWALES, RAIN GARDENS,
AND UNDERDRAINS THROUGHOUT THE PARK. THE GRAVEL WALKING TRAIL IS OVER 2 MILES IN LENGTH AND LOCATED AROUND THE PERIMETER AND

THROUGHOUT THE PARK. AND WILL ALSO PROVIDE A FUTURE EXTENSION TO

THE MUSSER GAP TRAIL NETWORK. FUTURE PHASES FOR WHITEHALL ROAD

APPROVAL BY FERGUSON TOWNSHIP.

REGIONAL PARK WILL REQUIRE SUBSEQUENT LAND DEVELOPMENT REVIEW AND

<u>RIP-RAP APRON DETAIL</u> n.t.s.

1. Special protection measures should be taken to identify the bottoms of stormwater basins and rain garden areas to avoid tracking of heavy equipment and soil compaction during the stripping process. Protecting these areas with temporary orange construction fence during earthwork activities is required to avoid compaction of soils and negatively impacting the infiltration capabilities of the stormwater facilities. Where possible, excavators or backhoes should work from the sides to remove the topsoil within these areas.

2. Sediment accumulation shall be removed from all stormwater facilities and BMPs prior to fine grading and placement of amended topsoil mix, gravel, and/or underdrain system. Alternatively, silt sock may be used to protect the BMP areas, and any silt accumulation shall be removed if present prior to fine grading and/or seeding. 3. Compaction of the soil structure in the bottom of any stormwater infiltration areas shall be avoided. For micro-scale and small-scale applications, excavating equipment should have arms with adequate

extension so they do not have to work inside the footprint of the infiltration area to avoid compaction. Contractors can utilize a cell construction approach, whereby the proposed infiltration area is split into 500 to 1000 sq. ft. temporary cells with a 10 to 15 foot earth bridge in between, so that cells can be excavated from the side. Excavated material should be placed away from the open excavation so as to not jeopardize the stability of the side walls. The Contractor may request alternate methods of excavation, which shall be approved by the Owner prior to implementation. 4. All field and unpaved area subgrades (excluding stormwater infiltration areas) should be compacted to a maximum of 90% Proctor. If a higher compaction exists, the surface should be scarified to bring the surface to below 90% Proctor. The subgrade should be graded to match the final grade. The contractor may not achieve proposed grades by increasing or decreasing topsoil depths. The Landscape

Architect should review the subgrade before beginning placement of topsoil. 5. Topsoil depth should be at least 6 inches (12 inches for amended soil locations as indicated on plan) and compacted to 85% Proctor. If the surface is greater than 85% Proctor, it should be scarified to bring the Proctor values down below 85%. Any bumps or depressions that occur shall be graded and re-tamped until a satisfactory grade is established.

6. Final seeding: Seeding shall be completed as soon as possible after final grade & soil placed to avoid exposure to sun, rainfall, sediment and silt accumulations, all of which can inhibit the infiltration capabilities of the soil. Prior to seeding, the surface must be free of surface water, saturated conditions, and silt and sediment accumulation. 7. The site is located in a State College Borough Water Authority Well Head Sensitive Area, as defined in the Spring Creek Watershed Stormwater Ordinance. Additional care and precaution should be taken to

ensure that all temporary and permanent erosion & sediment control and stormwater management facilities are installed correctly to provide adequate protection to the adjacent well field site. 8. Compaction test reports shall be kept on file at the site and be subject to review at all times with copies being forwarded to the Township Engineer.

9. Whenever embankment fill material in excess of three feet is to be used, each layer of compacted fill shall be tested to determine its density per ASTM 2922 or ASTM 3017. The density of each layer shall be 98% of a Standard Proctor Density analysis per ASTM 698. All embankment soils shall have a K factor of 0.32 or less to minimize erosion. 10. When rock is encountered during the excavation of an infiltration area, it shall be removed to an elevation of at least 30 inches below proposed basin floors. All exposed cracks and fissures are to be

11. Temporary and permanent grasses or stabilization measures shall be established on the sides and base of all earthen basins within 15 days of construction.

### STORMWATER FACILITIES CONSTRUCTION INSPECTION PROGRAM

of minimum 10 in/hr, maximum 6 in/hr.

structurally filled.

Prior to the installation or implementation of the following stormwater management facilities and best management practices (BMPs), the Owner or Township shall be notified and given the opportunity to provide a licensed engineer or soil scientist for inspection of the soil conditions and stormwater management facilities to ensure proper installation during the following critical stages: 1. Creation of the amended topsoil: The amended soil mixture shall be free of clay and native soil clumps larger than 2" in size, and shall be thoroughly mixed to create a homogeneous state of soil, sand, and mulch. Condition of the topsoil materials shall be inspected 1) prior to mixing, and 2) following mixing but prior to infiltration testing. Amended soil must be tested to meet infiltration rate requirement

2. Placement of underdrain systems, gravel, and/or amended topsoil mixture: Stormwater facility subsoils shall be inspected to ensure that compaction or accumulation of silt and sediment did not occur within the infiltration facilities. If compaction is apparent in the soil surface due to presence of standing water or visual inspection of the soil material, infiltration testing may be required to determine that the design infiltration rates determined during pre-development soil testing are still achievable within the stormwater facilities or BMP.

3. Final seeding: Prior to seeding to ensure no compaction or silt accumulation has occurred within the stormwater facilities after the amended soil was placed and while awaiting final seeding. If compaction occurred or an impermeable layer has been created due to silt and/or exposure to weather, remediation of the surface may be required, which may include scarification of the subsoil and/or amended soil layer, or removal and replacement of the impermable layer.

4. Installation of outlet structures for Basins 1, 2, 3, and 4, and rain gardens as applicable.

## STORMWATER FACILITIES POST-CONSTRUCTION MAINTENANCE PROGRAM

A. The owner shall be responsible for ensuring the proper operation and function of the stormwater facilities located on the property, and the program shall include the following:

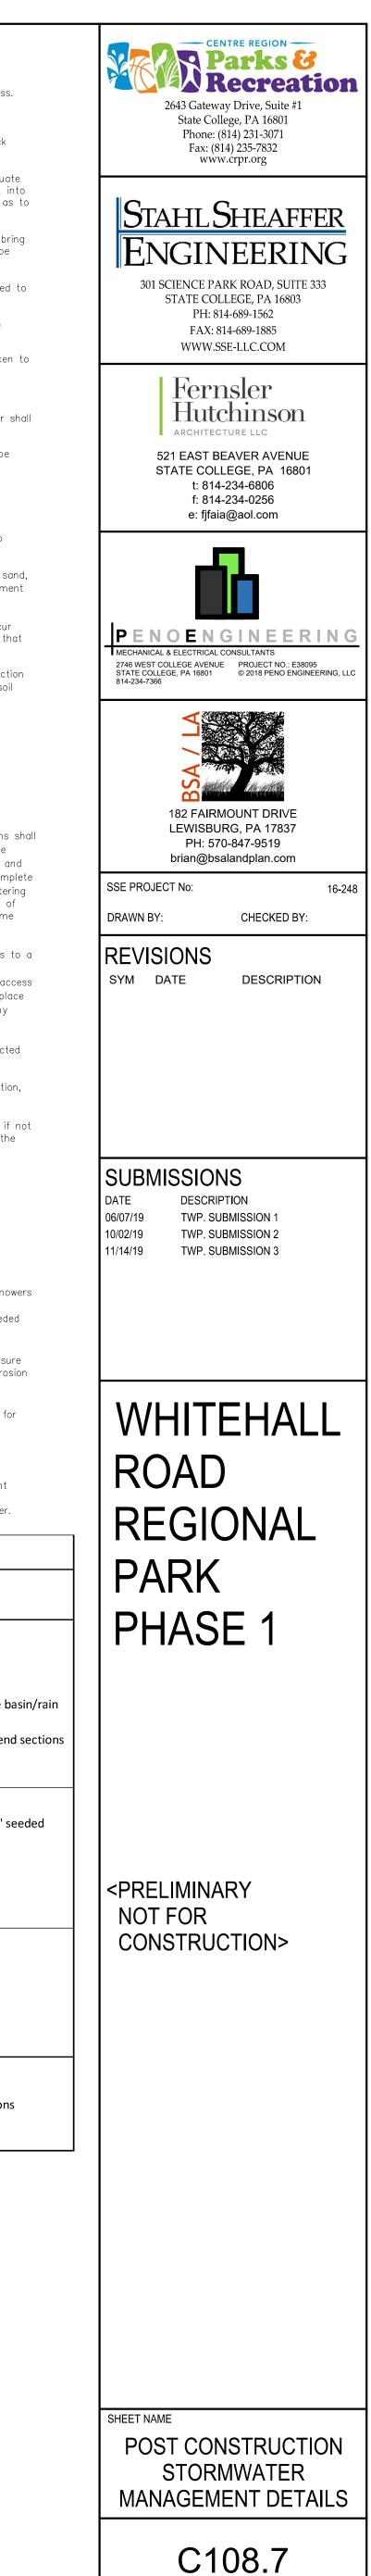

1. Following construction, any damaged or incidentally compacted areas shall be restored to their design condition prior to final topsoil and seeding placement.

- 2. The owner shall complete a visual inspection at least once every six (6) months, and immediately after major storm events (i.e. 2.5 inches or more in a 48-hour period), and one of the inspections shall be after leaves have fallen from trees in autumn. Such a visual inspection shall at least involve an examination for debris deposition (such debris may include, but shall not be limited to aggregate material, leaves, grass clippings, and soil material), settlement, sinkholes, seeps, structural cracking, animal burrows, excessive vegetation, foundation movement, dead plantings, erosion, depressions, and water retention times that exceed seventy-two (72) hours. A visual inspection of the trees and shrubs in the beginning and middle of the growing season to evaluate health of plantings and to complete any necessary pruning. Any perennial plantings shall be cut down and clippings removed at the end of each growing season. During periods of extended drought (i.e. July and August), additional watering of plantings may be required. All inlet pipes, outlet pipes, outlet inlet, storm piping, and drainage structures shall be kept free of any obstructions and foreign material that would cause disruption of water flow in a manner not anticipated for the facility. A written report documenting each inspection shall be retained by the designee, including the date of inspection, list of items inspected, name and organization of the person conducting the inspection, and a list of maintenance correction tasks performed.
- 3. The owner shall remove any accumulation of debris from stormwater management areas); maintain groundcover vegetation within any above-ground stormwater management system(s) and on berms to a height that does not exceed six (6) inches; and immediately repair any erosion damage by replacing topsoil on all areas that experience erosion, and seeding, mulching and matting such areas immediately in accordance with the specifications contained in the applicable erosion and sediment pollution control plan and/or approved post construction stormwater management plan. Vehicular access is prohibited within basins; and care should be taken to avoid excessive compaction by mowers. Dislodged rock in any riprap apron should be reset in place. Removal of sediment/debris shall take place when the area has dried, if possible. Rain garden(s) that do not drain within seventy-two (72) hours shall be evaluated by a qualified engineer, geologist, and/or hydrogeologist prior to initiating any repair and/or reconstruction activities.
- 4. The owner shall remove trash bags and/or litter from such outlets during periods between storm events. Man-made trash removed from any facility shall be disposed of properly in containers collected by a licensed commercial trash hauler.
- 5. A written report documenting each inspection shall be retained by the designee, including the date of inspection, list of items inspected, name and organization of the person conducting the inspection, and a list of maintenance correction tasks performed. 6. For any structural facility (pipe, inlet, manhole), it must be repaired or replaced in a timely manner if damaged more than superficially, in a way that is a safety hazard, if structurally unsound, or if not
- substantially performing as it is intended per the original design. The owner shall keep a record of any repaired or replaced facility, including costs, dates, materials removed, materials placed, and the contractor(s) information.
- 7. The designee shall immediately notify the Township and Centre County Conservation District prior to initiating any "major" repair activities (such repairs that may be required as a result of settlement, sinkholes, seeps, structural cracking, foundation movement, and water retention times that exceed seventy-two hours). All "major" repairs shall be conducted under the direction and supervision of a qualified engineer, geologist, and/or hydrogeologist.
- 8. All impervious surfaces shall be maintained clean of oil, fuel or other toxic spills, in accordance with state, federal or local regulations.
- 9. The stormwater management facilities shall be maintained in the following manner: a. Stormwater Basins and Rain Gardens: Keep free of debris and leaves. Minimize compaction of the bottom of the bed by promoting natural, native vegetation and eliminating the need for riding mowers within the bottom of the bed area by maintaining the growth with non-compacting equipment (trimmers, etc) that will promote vegetated growth within infiltration and detention areas. The only
- exception will be an annual mowing at the end of the growing season. The basin bottom, banks, outlet structure and downstream outfall shall be inspected for erosion issues and repaired as needed with topsoil, seed, or rip rap as required.
- b. Vegetated Swales and Steep Slopes: Keep free of debris and leaves to ensure free movement of runoff. During initial establishment period, inspect erosion control matting and vegetation to ensure all swales and banks become fully stabilized, reseed or repair matting as required. Provide long-term inspection of swales and steep slopes to identify rills or channels that have formed from erosion and channelized runoff, regrade and revegetate if erosion occurs.
- c. Storm Inlets and Storm Sewers: Keep free of debris and leaves both within the storm inlet and externally above the grate and stormwater collection area. Inspect storm inlets and storm sewers for missing or broken materials, and replace or repair as required. Inspect inlets for accumulated sediment and properly dispose of waste material. d. Vegetated Filter Strip: Keep area free of debris. Monitor for adequate grass cover and reseed where needed. Regrade any eroded areas and permanently seed.

### B. The Owner is responsible for maintaining the stormwater management in accordance with the approved design. If the Township, Conservation District, or DEP determines at any time that any permanent stormwater facility has been eliminated, altered or improperly maintained, the Owner of the property shall be advised of corrective measures required and given 7 days to initiate appropriate action in accordance with a time schedule dictated by the Township. If such action is not taken by the property Owner, the Township may cause the work to be done and charge all costs to the property owner.

### STORMWATER BMP INSPECTION AND MAINTENANCE SUMMARY

ВМР	INSPECTION FREQUENCY	INSPECTION ACTIVITY	ROUTINE MAINTENANCE & REPAIRS
STORMWATER BASIN & RAIN GARDENS	EVERY 6 MONTHS OR AFTER LARGE STORM EVENT (>2.5" in 48 HR)	<ul> <li>Inspect for trash or large debris</li> <li>Observe outlet structure, and pipe outfall for clogs or damage.</li> <li>Observe rip rap areas for erosion or displaced rock</li> <li>Observe banks for erosion or sags</li> <li>Observe basin/rain garden bottoms for standing water</li> </ul>	<ul> <li>Keep free of debris.</li> <li>Mow annually, otherwise maintain by hand trimming.</li> <li>Repair &amp; seed eroded areas</li> <li>Scarify surface or otherwise remove any layers on the bagarden bottom that inhibits drainage</li> <li>Repair or replace broken grates, outlet structures, or end</li> <li>Install additional rip rap as necessary</li> </ul>
VEGETATED SWALES & STEEP SLOPES	ANNUALLY	<ul> <li>Inspect for trash or large debris</li> <li>Observe rip rap areas for erosion or displaced rock</li> <li>Observe banks for erosion, rills or channels</li> <li>Ensure swales are following intended flow path</li> <li>Observe end sections and culverts</li> </ul>	<ul> <li>Keep free of debris to maintain flow path.</li> <li>Mowing can occur regularly, or minimally in "no mow" seareas.</li> <li>Repair &amp; seed eroded areas</li> <li>Install additional rip rap as necessary</li> <li>Repair or replace broken culverts or end sections</li> </ul>
STORM INLETS & STORM SEWERS	ANNUALLY	<ul> <li>Inspect for trash or large debris above the grate or within the structure/pipe</li> <li>Oberve for cracks or deficiencies in the grates or concrete structure</li> </ul>	<ul> <li>Keep free of debris and grass clippings.</li> <li>Repair or replace broken pipes or inlets as required.</li> </ul>
VEGETATED FILTER STRIP	ANNUALLY	<ul> <li>Inspect for erosion and areas of channelized flow</li> <li>Inspect for minimal grass cover</li> </ul>	<ul> <li>Repair and seed eroded areas</li> <li>Regrade if needed to maintain flat sheet flow conditions</li> </ul>

### GENERAL EROSION AND SEDIMENTATION CONTROL METHODS/PROCEDURES

In all cases the smallest practical area of land surfaces shall be disturbed. Erosion and sedimentation controls must be constructed, stabilized, and functional before site disturbance within the tributary areas of those controls.

All sediment shall be prevented from entering any existing storm drain or ditch through use of filter fabric fence, sediment traps,

All construction traffic shall enter and exit the site via the proposed rock construction entrance.

### EROSION & SEDIMENT CONTROL CONSTRUCTION NOTES

straw blankets, and rock filters.

1. Special protection measures should be taken to identify infiltration bed, basin, and swale areas to avoid tracking of heavy equipment and soil compaction during the stripping process. Flagging and protecting these areas during earthwork activities is highly recommended to avoid compaction of soils and negatively impacting the infiltration capabilities of the stormwater facilities. Where possible, excavators or backhoes should work from the sides to remove the topsoil within these areas.

2. Sediment accumulation shall be removed from all stormwater facilities and BMPs prior to fine grading and placement of amended topsoil mix, gravel, and/or underdrain system. Alternatively, silt sock may be used to protect the BMP areas, and any silt accumulation shall be removed if present prior to fine grading and/or seeding.

3. Compaction of the soil structure in the bottom of any stormwater infiltration beds, basins, or swales shall be avoided. For micro-scale and small-scale applications, excavating equipment should have arms with adequate extension so they do not have to work inside the footprint of the infiltration area to avoid compaction. Contractors can utilize a cell construction approach, whereby the proposed infiltration area is split into 500 to 1000 sq. ft. temporary cells with a 10 to 15 foot earth bridge in between, so that cells can be excavated from the side. Excavated material should be placed away from the open excavation so as to not jeopardize the stability of the side walls. The Contractor may request alternate methods of excavation, which shall be approved by the Owner prior to implementation.

4. All field and unpaved area subgrades (excluding stormwater infiltration areas) should be compacted to a maximum of 90% Proctor. If a higher compaction exists, the surface should be scarified to bring the surface to below 90% Proctor. The subgrade should be graded to match the final grade. The contractor may not achieve proposed grades by increasing or decreasing topsoil depths. The Landscape Architect should review the subgrade before beginning placement of topsoil.

Topsoil depth should be at least 6 inches and compacted to 85% Proctor. If the surface is areater than 85% Proctor, it should be scarified to bring the Proctor values down below 85%. Any bumps or depressions that occur shall be graded and re-tamped until a satisfactory grade is established.

5. Seeding shall be applied to all disturbed areas as soon as practical following completion of fine grading. Disturbed areas that will not be topsoiled and fine graded within 2 weeks of being excavated shall be temporarily seeded and mulched. Prior to seeding, the surface must be free of surface water, saturated conditions, and silt and sediment accumulation.

## MAINTENANCE OF EROSION AND SEDIMENTATION CONTROL FACILITIES

All erosion and sedimentation control facilities must be maintained in operating condition including replacement of plugged sediment sock, until upstream areas are stabilized with a minimum of 70% perennial uniform vegetated ground cover.

Erosion and sedimentation control devices shall be inspected after each runoff event and on a weekly basis.

Sediment at sediment sock must be removed when accumulations reach  $\frac{1}{2}$  the above ground height of the sock.

Sediment removed from sediment sock shall be placed in a designated topsoil stockpile area.

### <u>SEEDING</u>

Seeding shall be applied to all disturbed areas as soon as practical following completion of fine grading. Disturbed areas that will not be topsoiled and fine graded within 2 weeks of being excavated shall be temporarily seeded and mulched. <u>Temporary seed mixture shall be as follows:</u>

Formula and Species	% By Mass	iimum % Germination	Weed Seed	Seeding Rate Ib/1000 s.y.
Formula E		 		———20.0 Total

Annual Ryegrass (Lolium multiflorum)	100	98	90	0.15	20.0

Permanent seed mixtures shall be as follows:

### Turf Grass Seed Mix Specifications

Mix Composition	
30.0% Festuca arundinacea,	<i>'Fawn'</i> (Tall Fescue, 'Fawn')
30.0% Lolium perenne,	'Shining Star' (Perennial Ryegrass, 'Shining Star' (turf typ
15.0% Poa pratensis,	'Volt' (Kentucky Bluegrass, 'Volt')
15.0% Poa pratensis,	'Shamrock' (Kentucky Bluegrass, 'Shamrock')
10.0% Lolium multiflorum	(Annual Ryegrass)

General Product Information: This mix is good for high-traffic areas.

Item Number: Ernst Seed, ERNMX-106, or approved equal

Product Categories: Lawn & Turfgrass Sites Height: 1.0 – 4.0 Ft Seeding Rate: 75-150 lb per acre, or 3-5 lb per 1,000 sq ft

General Product Information: The hardy inexpensive grass and grass-like species are ideal for retention basins that may have high salt inflows and where mowing may be required.

Item Number: Ernst Seed ERNMX-126

Product Categories: Stormwater Management Height: 0.3 – 5.0 Ft

Seeding Rate: 20-40 lb per acre, or 0.5 – 1.0 lb per 1,000 sq ft

### FILL MATERIAI :

The contractor shall balance all cuts and fill with the amount of rock and soil that is available on site. In the case that fill material is required for the site, the contractor is responsible to perform

environmental due dilligence and determine that all fill imported to the site meets DEP's definition of clean fill.

Clean fill is defined as uncontaminated, nonwater-loluble, nondecomposable inert solid material. The term includes soil, rock, stone, dredged material, used asphalt, and brick, block or concrete from construction and deomolition activities that is separate from other waste and recognizable as such. (25 Pa. Code 271.101 and 287.101) The term does not include materials placed in or on the waters of the Commonwealth unless otherwise authorized.

Environmental due diligence is defined as investigative techniques, inluding, but not limited to, visual property inspections, electronic data base searches, review of ownership and use of history of property, Sanborn maps, environmental questionnaires, transaction screens, analytical testing, environmental assessments or audits.

### SEQUENCE OF CONSTRUCTION FOR EROSION AND SEDIMENTATION CONTROL

1. Submit a detailed construction schedule to the Owner for evaluation and approval. The sequence below provides a general guidance installation of site features to minimize off-site erosion and sediment transport, however it is the Contractor's responsibility to review and determine the final process for installation and project completion, as it is recognized that external factors, including weather, material availability, and subcontractor coordination may impact the desired sequence of construction. 2. Install the rock construction entrance and compost filter sock in accordance with the contract drawings. Any adjustment to the location or layout of the entrance must be coordinated and approved by the County

- lower compost filter sock before leaving the site.
- place.
- work from the sides to place materials within the bottoms of the beds and basins.
- 11. Final grade new playing fields and excavate for vegetated swales in parking lot area. 12. Complete fine grading by placing topsoil in the location and depths specified on the construction plans and specifications.
- documents. 14. Begin construction of new buildings and install proposed utility connections, main lines, laterals and site lighting.
- management controls, swales, etc are installed.
- 16. Fertilize, mulch and seed all disturbed areas as specified.
- 19. Request final site inspection by the Township and Centre County Conservation District.

## EROSION AND SEDIMENT CONTROL PLAN STANDARD NOTES:

1. Topsoil stockpile heights shall not exceed 45 feet. Stockpile sides must be 3:1 or flatter.

2. A copy of the approved erosion and sediment control plan must be available at the project site at all times. The operator shall assure that the approved erosion and sediment control plan is properly and completely implemented. 3. Before initiating any revisions to the approved erosion and sediment control plan or revisions to other plans which may affect the effectiveness of the approved E&S control plan, the operator must receive approval

of the revisions from the Centre County Conservation District. 4. At least 7 days before starting any earth disturbance activities, the owner and/or operator shall invite all contractors involved in those activities, the landowner, all appropriate municipal officials, the erosion and sediment control plan preparer, and a representative of the Centre County Conservation District to an on-site pre construction meeting. 5. At least 3 days before starting any earth disturbance activities, all contractors involved in those activities shall notify the Pennsylvania One Call System Incorporated at 1-800-242-1776 for the location of existing underground utilities. 6. All earth disturbance activities shall proceed in accordance with the following sequence. Each stage shall be completed and immediately stabilized before any following stage is initiated. Clearing, grubbing, and topsoil

stripping shall be limited only to those areas described in each stage. 7. Immediately upon discovering unforseen circumstances posing the potential for accelerated erosion and/or sediment pollution, the operator shall implement appropriate best management practices to eliminate the potential for accelerated erosion and/or sediment pollution. 8. All pumping of sediment laden water shall be through a sediment control BMP, such as a pumped water filter bag or equivalent sediment removal facility, over undisturbed vegetated areas. 9. Upon completion of all earth disturbance activities and permanent stabilization of all disturbed areas, the owner and/or operators shall contact the Centre County Conservation District for an inspection prior to removal of the BMP's. 10. Upon completion of all earth disturbance activities, removal of all temporary BMP's and permanent stabilization of all disturbed areas, the owner and/or operators shall contact the Centre County Conservation District for a final inspection.

11. All channels must be kept free of obstructions such as fill, fallen leaves, & woody debris, accumulated sediment, and construction materials/wastes. Channels should be kept mowed and/or free of all weedy, brushy, or woody growth. Any underground utilities running across/through the channel(s) shall be covered immediately and the channel(s) repaired and stabilized per the channel cross -section detail. 12. Vegetated channels shall be constructed free of rocks, tree roots, stumps, or other projections that will impede normal channel flow and/or prevent good lining to soil contact. The channel shall be initially over excavated to allow for the placement of topsoil. 13. Sediment basins/traps shall be kept free of all trash, concrete wash water and other debris that pose the potential for clogging the basin/trap outlet structures and/or pose the potential for pollution to waters of the Commonwealth

14. When sediment has accumulated to the clean out elevation on any stake, all accumulated sediment shall be removed from the entire trap/basin bottom. 15. Sediment basins must be protected from unauthorized acts of third parties. 16. Fill material for the embankments shall be free of roots, or other woody vegetation, organic material, large stones, and other objectionable materials. The embankment shall be compacted in maximum 12" layered lifts at 98% density. 17. Permanent stabilization is defined as a minimum uniform 70% perennial vegetative cover or other permanent cover with a density sufficient to resist accelerated surface erosion and subsurface characteristics sufficient to resist sliding and other movements.

18. Immediately after earth disturbance activities cease, the operator shall stabilize the disturbed areas. During stabilization periods, mulch must be applied at the specific rates. Disturbed areas which are not at finished grade and which will be within 1 year must be stabilized in accordance with the temporary vegetative stabilization specifications. Disturbed areas which are at final grade or which will not be within 1 year must be stabilized in accordance with the permanent vegetative stabilization specifications. 19. An erosion control blanket will be installed on all disturbed slopes steeper than 3:1, all areas of concentrated flows, and disturbed areas within 50' of Waters of the Commonwealth.

to perform as expected, replacement BMP's or modifications of those installed will be required. 21. Sediment must be removed from storm water inlet protection after each runoff event. 23. The permittee and co-permittee must ensure that visual site inspectors are conducted weekly, and after each measurable precipitation event by qualified personnel, trained and experienced in erosion and sediment control, to ascertain that the Erosion and Sediment Control (E&S) BMP's are operational and effective in preventing pollution to the waters of the Commonwealth. A written report of each inspection shall be kept, and

include: a) a summary of the site conditions, E&S BMP's, and compliances; and b) the date, time, and the name of the person conducting the inspection. 24. All building materials and wastes must be removed from the site and recycled or disposed of in accordance with the Department's Solid Waste Management Regulations at 25 Pa. Code 260.1 et seq., 271.1., and 287.1 et seq. No building materials or wastes or unused building materials shall be burned, buried, dumped, or discharged at the site. 25. The contractor will be responsible for the removal of any excess material and make sure the site(s) receiving the excess has an approved erosion and sediment control plan that meets the conditions of Chapter 102 and/or other State or Federal regulations.

### **BLASTING NOTES:**

- 1. BLASTING ACTIVITIES MUST BE MONITORED BY EITHER A PENNSYLVANIA LICENSED PROFESSIONAL GEOLOGIST OR ENGINEER.
- VELOCITY, ACCELERATION AND DISPLACEMENT AS WELL AS ANY POTENTIAL EFFECTS TO THE GROUND WATER AQUIFER SYSTEM.
- OCCURS, REMEDIATION MEASURES MUST BE APPROVED BY SCBWA.

### PROCEDURES FOR SINKHOLE REMEDIATION

AND STAHL SHEAFFER ENGINEERING (814)-689-1562 IN THE CASE THAT NO CONTACT CAN BE MADE, CONTINUE THE FOLLOWING PROCEDURES:

- IMMEDIATELY ROPE OFF THE AREA.
- DIVERT ANY RUNOFF THAT IS ENTERING THE CAVITY.

- WITHIN 10 CALENDAR DAYS.

Conservation District. Store topsoil stockpiles in designated area on site. Other areas used for topsoil storage shall be protected with compost filter sock on the downstream side of the stockpile. 3. Construct and stabilize southern swales at the bottom of the site, as well as the diversion compost filter sock on the southern end of the site that will direct runoff to the rock filter and eventually through the 4. Place temporary orange construction fence around the bottom of each stormwater management area to preserve stormwater infiltration capabilities of the soil.

5. Establish areas to be graded, preserving as much natural vegetation as practical. Cut and clear necessary vegetation to install compost filter sock where indicated throughout the site. 6. Strip topsoil in only areas necessary for project completion and store in designated topsoil stockpile location. Do not strip entire site, specifically the southern area below the developed that is designated to be transition from agricultural/farming cover to No-Mow Fescue (see Landscaping Plan). This area is proposed to be transitioned through the process of undercutting and tilling, and the existing topsoil will remain in

7. Rough grade and excavate for the proposed stormwater management areas, to include the installation of underdrain systems as applicable. Avoid compaction of soil in the bottom of any stormwater infiltration beds, basins, or swales. Where possible, excavators or backhoes should work from the sides to excavate the reservoir layer to its appropriate design depth and dimensions. For micro-scale and small-scale applications, excavating equipment should have arms with adequate extension so they do not have to work inside the footprint of the infiltration area (to avoid compaction). Contractors can utilize a cell construction approach, whereby the proposed infiltration area is split into 500 to 1000 sq. ft. temporary cells with a 10 to 15 foot earth bridge in between, so that cells can be excavated from the side. Excavated

material should be placed away from the open excavation so as to not jeopardize the stability of the side walls. 8. In all cases, within 7 days after earth disturbance activities cease in any area of the project, the operator shall stabilize all disturbed areas. During non-germinating months, mulch or protective blanketing shall be applied as described in the plan. Areas not at finished grade may be stabilized in accordance with the temporary stabilization specifications. 9. Install gravel, amended soils, outlet pipes, culverts and rip rap apron within the stormwater management basins and rain gardens as shown on the construction plans. Where possible, excavators or backhoes should

10. Rough grade remainder of the site, including excavation for the vegetated swales. Place swale lining within the trenches as soon as possible following backfill of trenches to provide protection of sediment within the swale. If a rain event that causes erosive damage or sediment transport to the trenches occurs before site stabilization, the sediment shall be removed before final seeding is completed.

13. Seed basin area and all other parkland grass/meadow areas upon completion of fine grading. Seeding should meet all specifications detailed in the erosion & sediment control narrative and construction

15. Install concrete sidewalk, aggregate paths, and parking lot driving surface once site stabilization is complete. Do not construct aggregate paths until the upstream tributary areas are vegetated and stormwater

17. Remove any accumulated sediment from the bottom of the sediment basin. Excavate additional material from bottom of basin as necessary for placement of amended topsoil. Scarify bottom of basin prior to topsoil placement. Place topsoil using low impact equipment to avoid compacting basin bottom. Install permanent seeding and soil supplements in basin bottom. 18. Upon 70% vegetative cover of erosion resistant perennial species, remove all erosion and sedimentation control devices.

20. Until the site is stabilized, all erosion and sediment control BMP's must be maintained properly. Maintenance must include inspections of all erosion and sediment control BMP's after each runoff event and on a weekly basis. All preventative and remedial maintenance work, including, repair, replacement, re- grading, reseeding, re-mulching and re-netting must be performed immediately. If erosion and sediment control BMP's fail

22. Sediment removed from BMP's shall be disposed of in landscaped areas outside of steep slopes, wetlands, floodplains, or drainage swales and immediately stabilized, or placed in topsoil stockpiles.

IF DRILLING OR BLASTING IS REQUIRED DURING CONSTRUCTION, ALL ACTIVITIES MUST BE PLANNED WITH BOTH FERGUSON TOWNSHIP AND THE STATE COLLEGE BOROUGH WATER AUTHORITY.

IN THE CASE THAT DRILLING OR BLASTING ACTIVITIES WILL OCCUR THE FOLLOWING GUIDELINES MUST BE FOLLOWED:

2. THE AFOREMENTIONED LICENSED PROFESSIONAL MUST SUBMIT A REPORT WITH SPECIFIC BLASTING RECOMMENDATIONS WITH REGARDS TO AMOUNT OF CHARGE, FIRING TIMES, GROUND

3. BLASTING SHALL BE MONITORED BY THE LICENSED GEOLOGIST OR ENGINEER WITH SEISMOGRAPHIC EQUIPMENT AND ACCURATE RECORDS SHALL BE TAKEN FOR EACH BLAST.

4. BLASTING RECORDS MUST CONTAIN GENERAL LOCATION, DEPTH AND QUANTITY OF HOLES DRILLED AS WELL AS TYPE AND QUANTITY OF EXPLOSIVE USED, GROUND DATA, ETCETERA. 5. ALL BLASTING OPERATIONS SHALL BE CONDUCTED BY EXPERIENCED PERSONNEL WITH A VALID PENNSYLVANIA BLASTER'S LICENSE. IN THE EVENT THAT EXCESSIVE SUBSURFACE FRACTURING

6. THE DEVELOPER WILL REIMBURSE ASSOCIATED COSTS & EXPENSES FOR ALL CONSTRUCTION PHASES TO SCBWA & FERGUSON TOWNSHIP.

7. THE ABOVE STANDARDS MAY BE MODIFIED AS DEEMED NECESSARY BY SCBWA UPON AGREEMENT BETWEEN DEVELOPER, FERGUSON TOWNSHIP, SCBWA.

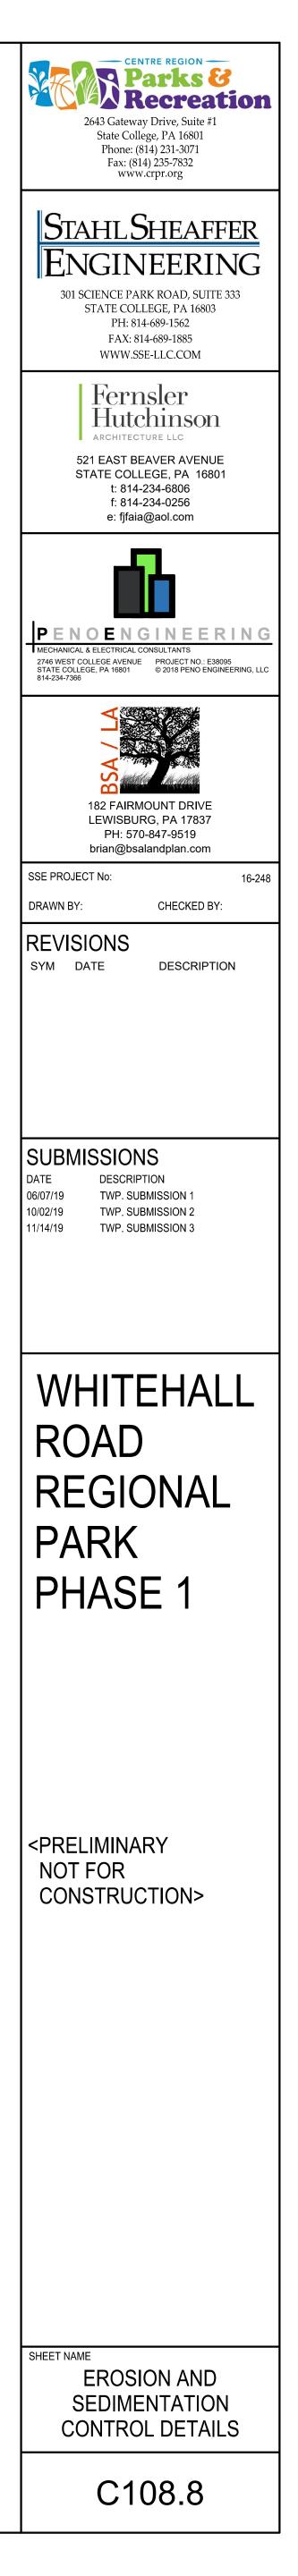

DURING DAILY SITE INSPECTIONS IF ANY SUBSIDENCE OR OPEN VOIDS ARE DISCOVERED IMMEDIATELY CALL THE EMERGENCY CONTACTS BELOW:

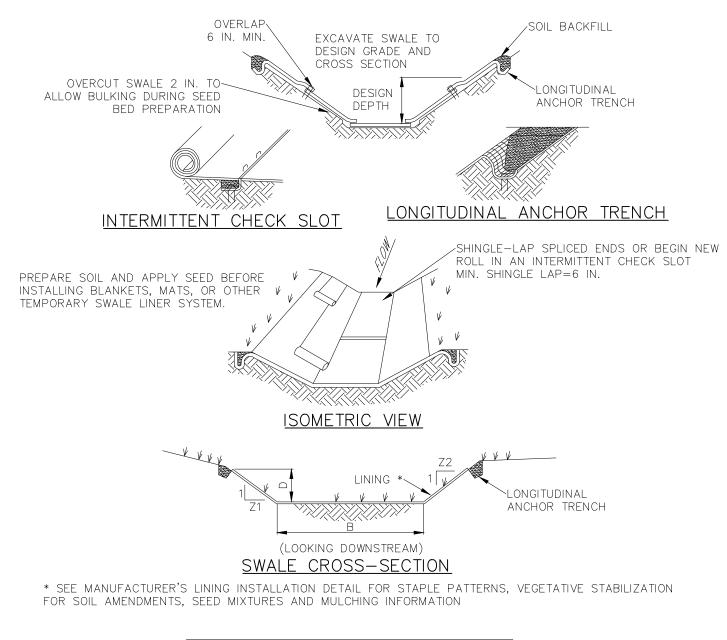

• STATE COLLEGE BOROUGH WATER AUTHORITY (814)-238-6766, FERGUSON TOWNSHIP ENGINEER (814)-238-4651, THE CONSTRUCTION PROJECT MANAGER, PROJECT GEOTECHNICAL ENGINEER,

STOP ALL EXCAVATION UPSLOPE OF THE AREA UNTIL FURTHER DIRECTION FROM GEOTECHNICAL ENGINEER IS RECEIVED.

• IN THE CASE THAT A SINKHOLE DOES DEVELOP, A TEMPORARY FIX MUST BE PROVIDED BY THE CONTRACTOR WITHIN 24 HOURS. WITHIN 5 DAYS A PERMANENT SOLUTION MUST BE CREATED WITH THE GEOTECHNICAL ENGINEER AND APPROVED BY STATE COLLEGE BOROUGH WATER AUTHORITY BEFORE COMPLETING ANY WORK. UNLESS OTHERWISE AGREED UPON, WORK MUST START

• STATE COLLEGE BOROUGH AND FERGUSON TOWNSHIP RESERVE THE RIGHT TO ENTER THE PROPERTY TO COMPLETE REPAIRS IF THE AFOREMENTIONED TIME FRAME IS NOT MET.

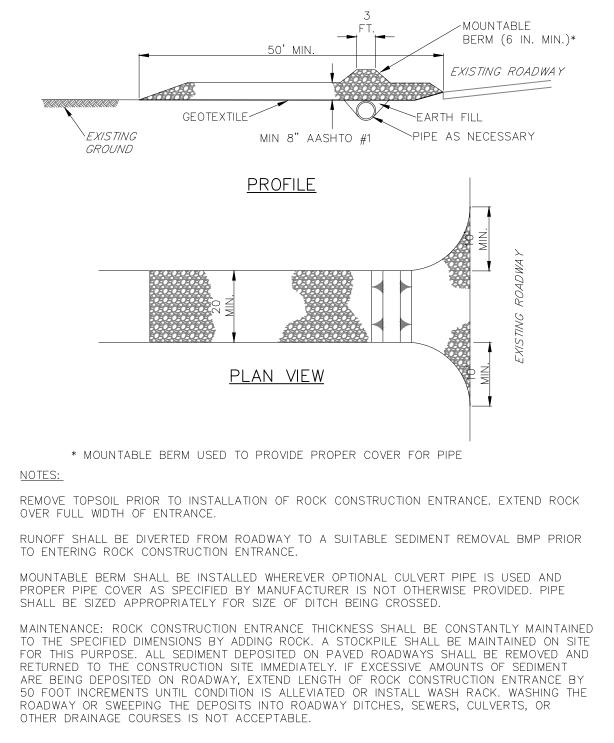

SWALE NO.	DEPTH D (FT)	TOP WIDTH W (FT)	LINING *
1	1.0	8.0	NAG S75; PERM. SEED
2	1.0	11.0	NAG SC150; PERM. SEED

11	0.50	17.0	NONE

<u>NOTES:</u> 1. SWALES SHALL BE LINED WITH S75BN NORTH AMERICAN GREEN EROSION CONTROL LINING. 2. ALL SWALES DESIGNATED ON THE EROSION AND SEDIMENT CONTROL PLANS SHALL BE LINED.

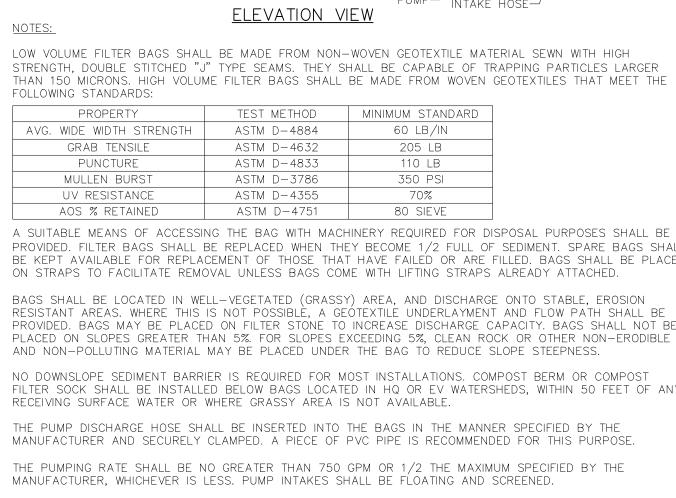

3. ANCHOR TRENCHES SHALL BE INSTALLED AT BEGINNING AND END OF CHANNEL IN THE SAME MANNER AS LONGITUDINAL ANCHOR TRENCHES. 4. CHANNEL DIMENSIONS SHALL BE CONSTANTLY MAINTAINED. CHANNEL SHALL BE CLEANED WHENEVER TOTAL CHANNEL DEPTH IS REDUCED BY 25% AT ANY LOCATION. 5. SEDIMENT DEPOSITS SHALL BE REMOVED WITHIN 24 HOURS OF DISCOVERY OR AS SOON AS SOIL CONDITIONS PERMIT ACCESS TO CHANNEL WITHOUT FURTHER DAMAGE. DAMAGED LINING SHALL BE REPAIRED OR REPLACED WITHIN 48 HOURS OF DISCOVERY.

GRASS LEAF) SHALL BE REMOVED IN ANY MOWING. GRAS 6. NO MORE THAN ONE THIRD OF THE SHO HEIGHT SHALL BE MAINTAINED BETWEEN 2 AND 3 INCHES UNLESS OTHERWISE SPECIFIED. EXCESS VEGETATION SHALL BE REMOVED FROM PERMANENT CHANNELS TO ENSURE SUFFICIENT CHANNEL CAPACITY.

VEGETATED SWALE INSTALLATION

ROCK CONSTRUCTION ENTRANCE

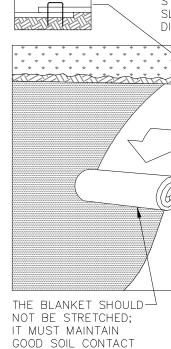

WELL VEGETATED, GRASSY AREA

PUMPED WATER FILTER BAG

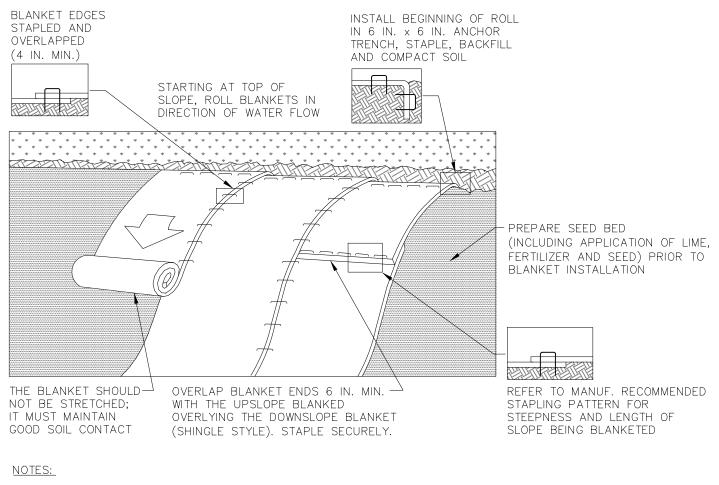

THE BLANKET SHALL BE STAPLED IN ACCORDANCE WITH THE MANUFACTURER'S RECOMMENDATIONS.

<u>NOTES:</u> SEED AND SOIL AMENDMENTS SHALL BE APPLIED ACCORDING TO THE RATES IN THE PLAN DRAWINGS PRIOR TO INSTALLING THE BLANKET. PROVIDE ANCHOR TRENCH AT TOE OF SLOPE IN SIMILAR FASHION AS AT TOP OF SLOPE. SLOPE SURFACE SHALL BE FREE OF ROCKS, CLODS, STICKS, AND GRASS. BLANKET SHALL HAVE GOOD CONTINUOUS CONTACT WITH UNDERLYING SOIL THROUGHOUT ENTIRE LENGTH. LAY BLANKET LOOSELY AND STAKE OR STAPLE TO MAINTAIN DIRECT CONTACT WITH SOIL. DO NOT STRETCH BLANKET

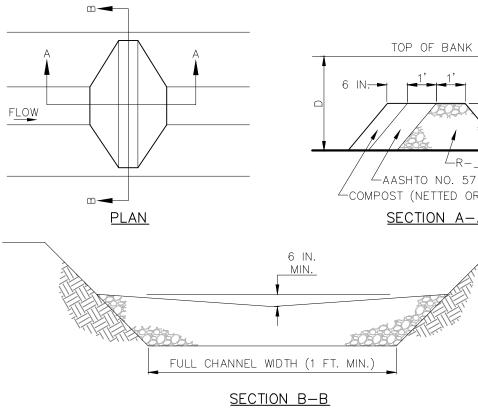

STAPLED AND OVERLAPPED (4 IN. MIN.)

BLANKET EDGES

BLANKETED AREAS SHALL BE INSPECTED WEEKLY AND AFTER EACH RUNOFF EVENT UNTIL PERENNIAL VEGETATION IS ESTABLISHED TO A MINIMUM UNIFORM 70% COVERAGE THROUGHOUT THE BLANKETED AREA. DAMAGED OR DISPLACED BLANKETS SHALL BE RESTORED OR REPLACED WITHIN 4 CALENDAR DAYS.

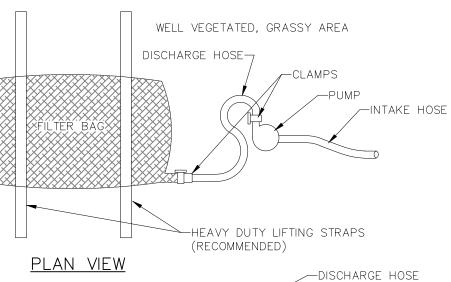

EROSION CONTROL BLANKET INSTALLATION

<u>NOTES:</u>

SEDIMENT MUST BE REMOVED WHEN ACCUMULATIONS REACH 1/2 THE HEIGHT OF THE FILTERS. IMMEDIATELY UPON STABILIZATION OF EACH CHANNEL, REMOVE ACCUMULATED SEDIMENT, REMOVE ROCK FILTER, AND STABILIZE DISTURBED AREAS.

ROCK SEDIMENT FILTER

ELEVA<u>tion view</u>

LOW VOLUME FILTER BAGS SHALL BE MADE FROM NON-WOVEN GEOTEXTILE MATERIAL SEWN WITH HIGH STRENGTH, DOUBLE STITCHED "J" TYPE SEAMS. THEY SHALL BE CAPABLE OF TRAPPING PARTICLES LARGER

TEST METHOD	MINIMUM STANDARD
ASTM D-4884	60 LB/IN
ASTM D-4632	205 LB
ASTM D-4833	110 LB
ASTM D-3786	350 PSI
ASTM D-4355	70%
ASTM D-4751	80 SIEVE

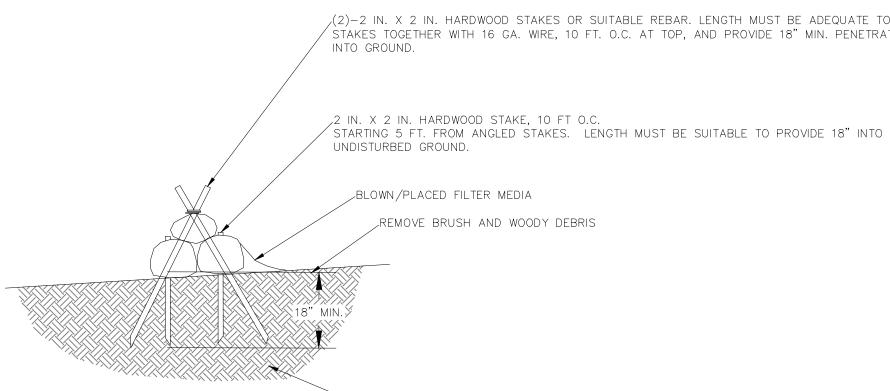

PROVIDED. FILTER BAGS SHALL BE REPLACED WHEN THEY BECOME 1/2 FULL OF SEDIMENT. SPARE BAGS SHALL BE KEPT AVAILABLE FOR REPLACEMENT OF THOSE THAT HAVE FAILED OR ARE FILLED. BAGS SHALL BE PLACED ON STRAPS TO FACILITATE REMOVAL UNLESS BAGS COME WITH LIFTING STRAPS ALREADY ATTACHED. BAGS SHALL BE LOCATED IN WELL-VEGETATED (GRASSY) AREA, AND DISCHARGE ONTO STABLE, EROSION RESISTANT AREAS. WHERE THIS IS NOT POSSIBLÈ, A GEÓTEXTILE UNDERLAYMENT AND FLOW PATH SHALL BE

PROVIDED. BAGS MAY BE PLACED ON FILTER STONE TO INCREASE DISCHARGE CAPACITY. BAGS SHALL NOT BE PLACED ON SLOPES GREATER THAN 5%. FOR SLOPES EXCEEDING 5%, CLEAN ROCK OR OTHER NON-ERODIBLE AND NON-POLLUTING MATERIAL MAY BE PLACED UNDER THE BAG TO REDUCE SLOPE STEEPNESS.

NO DOWNSLOPE SEDIMENT BARRIER IS REQUIRED FOR MOST INSTALLATIONS. COMPOST BERM OR COMPOST FILTER SOCK SHALL BE INSTALLED BELOW BAGS LOCATED IN HQ OR EV WATERSHEDS, WITHIN 50 FEET OF ANY RECEIVING SURFACE WATER OR WHERE GRASSY AREA IS NOT AVAILABLE. THE PUMP DISCHARGE HOSE SHALL BE INSERTED INTO THE BAGS IN THE MANNER SPECIFIED BY THE

THE PUMPING RATE SHALL BE NO GREATER THAN 750 GPM OR 1/2 THE MAXIMUM SPECIFIED BY THE MANUFACTURER, WHICHEVER IS LESS. PUMP INTAKES SHALL BE FLOATING AND SCREENED.

FILTER BAGS SHALL BE INSPECTED DAILY. IF ANY PROBLEM IS DETECTED, PUMPING SHALL CEASE IMMEDIATELY AND NOT RESUME UNTIL THE PROBLEM IS CORRECTED.

STACKED FILTER SOCK N.T.S.

VUNDISTURBED GROUND

STAKES TOGETHER WITH 16 GA. WIRE, 10 FT. O.C. AT TOP, AND PROVIDE 18" MIN. PENETRATION

/(2)-2 IN. X 2 IN. HARDWOOD STAKES OR SUITABLE REBAR. LENGTH MUST BE ADEQUATE TO WRAP

<u>NOTES:</u>

SOCK FABRIC SHALL MEET STANDARDS OF TABLE 4.1 OF THE PA DEP EROSION CONTROL

MANUAL. COMPOST SHALL MEET THE STANDARDS OF TABLE 4.2 OF THE PA DEP EROSION

COMPOST FILTER SOCK SHALL BE PLACED AT EXISTING LEVEL GRADE. BOTH ENDS OF THE

BARRIER SHALL BE EXTENDED AT LEAST 8 FEET UP SLOPE AT 45 DEGREES TO THE MAIN

ACCUMULATED SEDIMENT SHALL BE REMOVED WHEN IT REACHES 1/2 THE ABOVE GROUND

HEIGHT OF THE BARRIER AND DISPOSED IN THE MANNER DESCRIBED ELSEWHERE IN THE PLAN.

EVENT. DAMAGED SOCKS SHALL BE REPAIRED ACCORDING TO MANUFACTURER'S SPECIFICATIONS

BIODEGRADABLE COMPOST FILTER SOCKS SHALL BE REPLACED AFTER 6 MONTHS; PHOTODEGRADABLE SOCKS AFTER 1 YEAR. POLYPROPYLENE SOCKS SHALL

UPON STABILIZATION OF THE AREA TRIBUTARY TO THE SOCK, STAKES SHALL BE REMOVED. THE SOCK MAY BE LEFT IN PLACE AND VEGETATED OR REMOVED. IN THE LATTER CASE, THE MESH SHALL BE CUT OPEN AND THE MULCH SPREAD AS A SOIL SUPPLEMENT.

TYPICAL COMPOST FILTER SOCK

SPECIFIED FOR THE SIZE OF THE SOCK AND THE SLOPE OF ITS TRIBUTARY AREA.

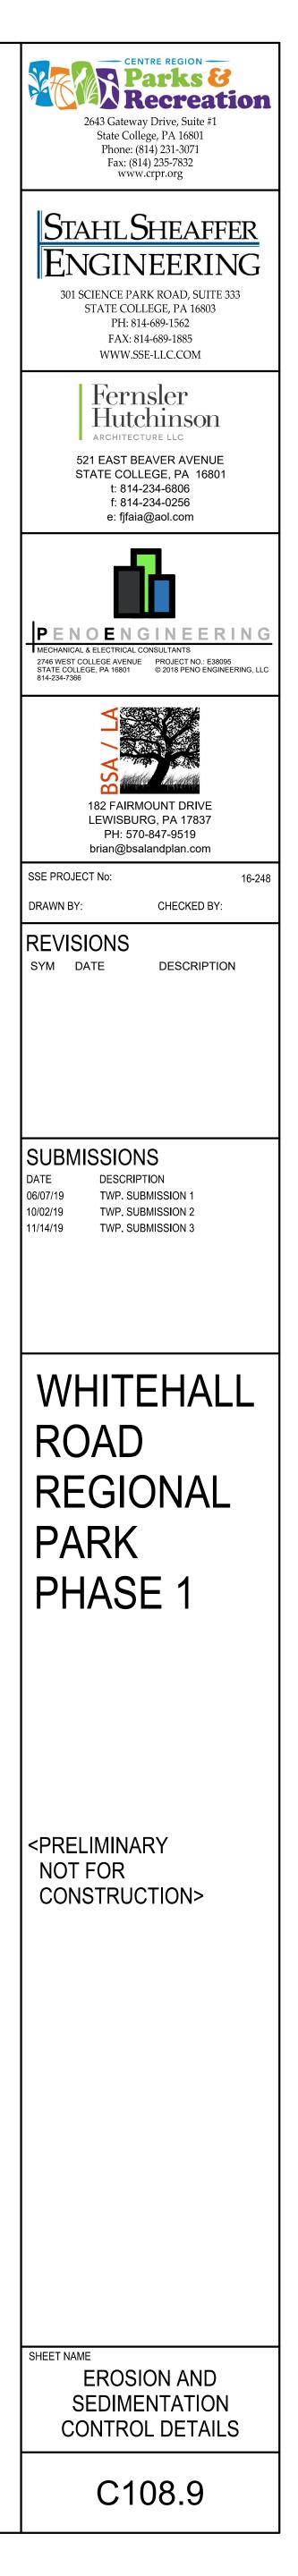

COMPOST FILTER SOCKS SHALL BE INSPECTED WEEKLY AND AFTER EACH RUNOFF

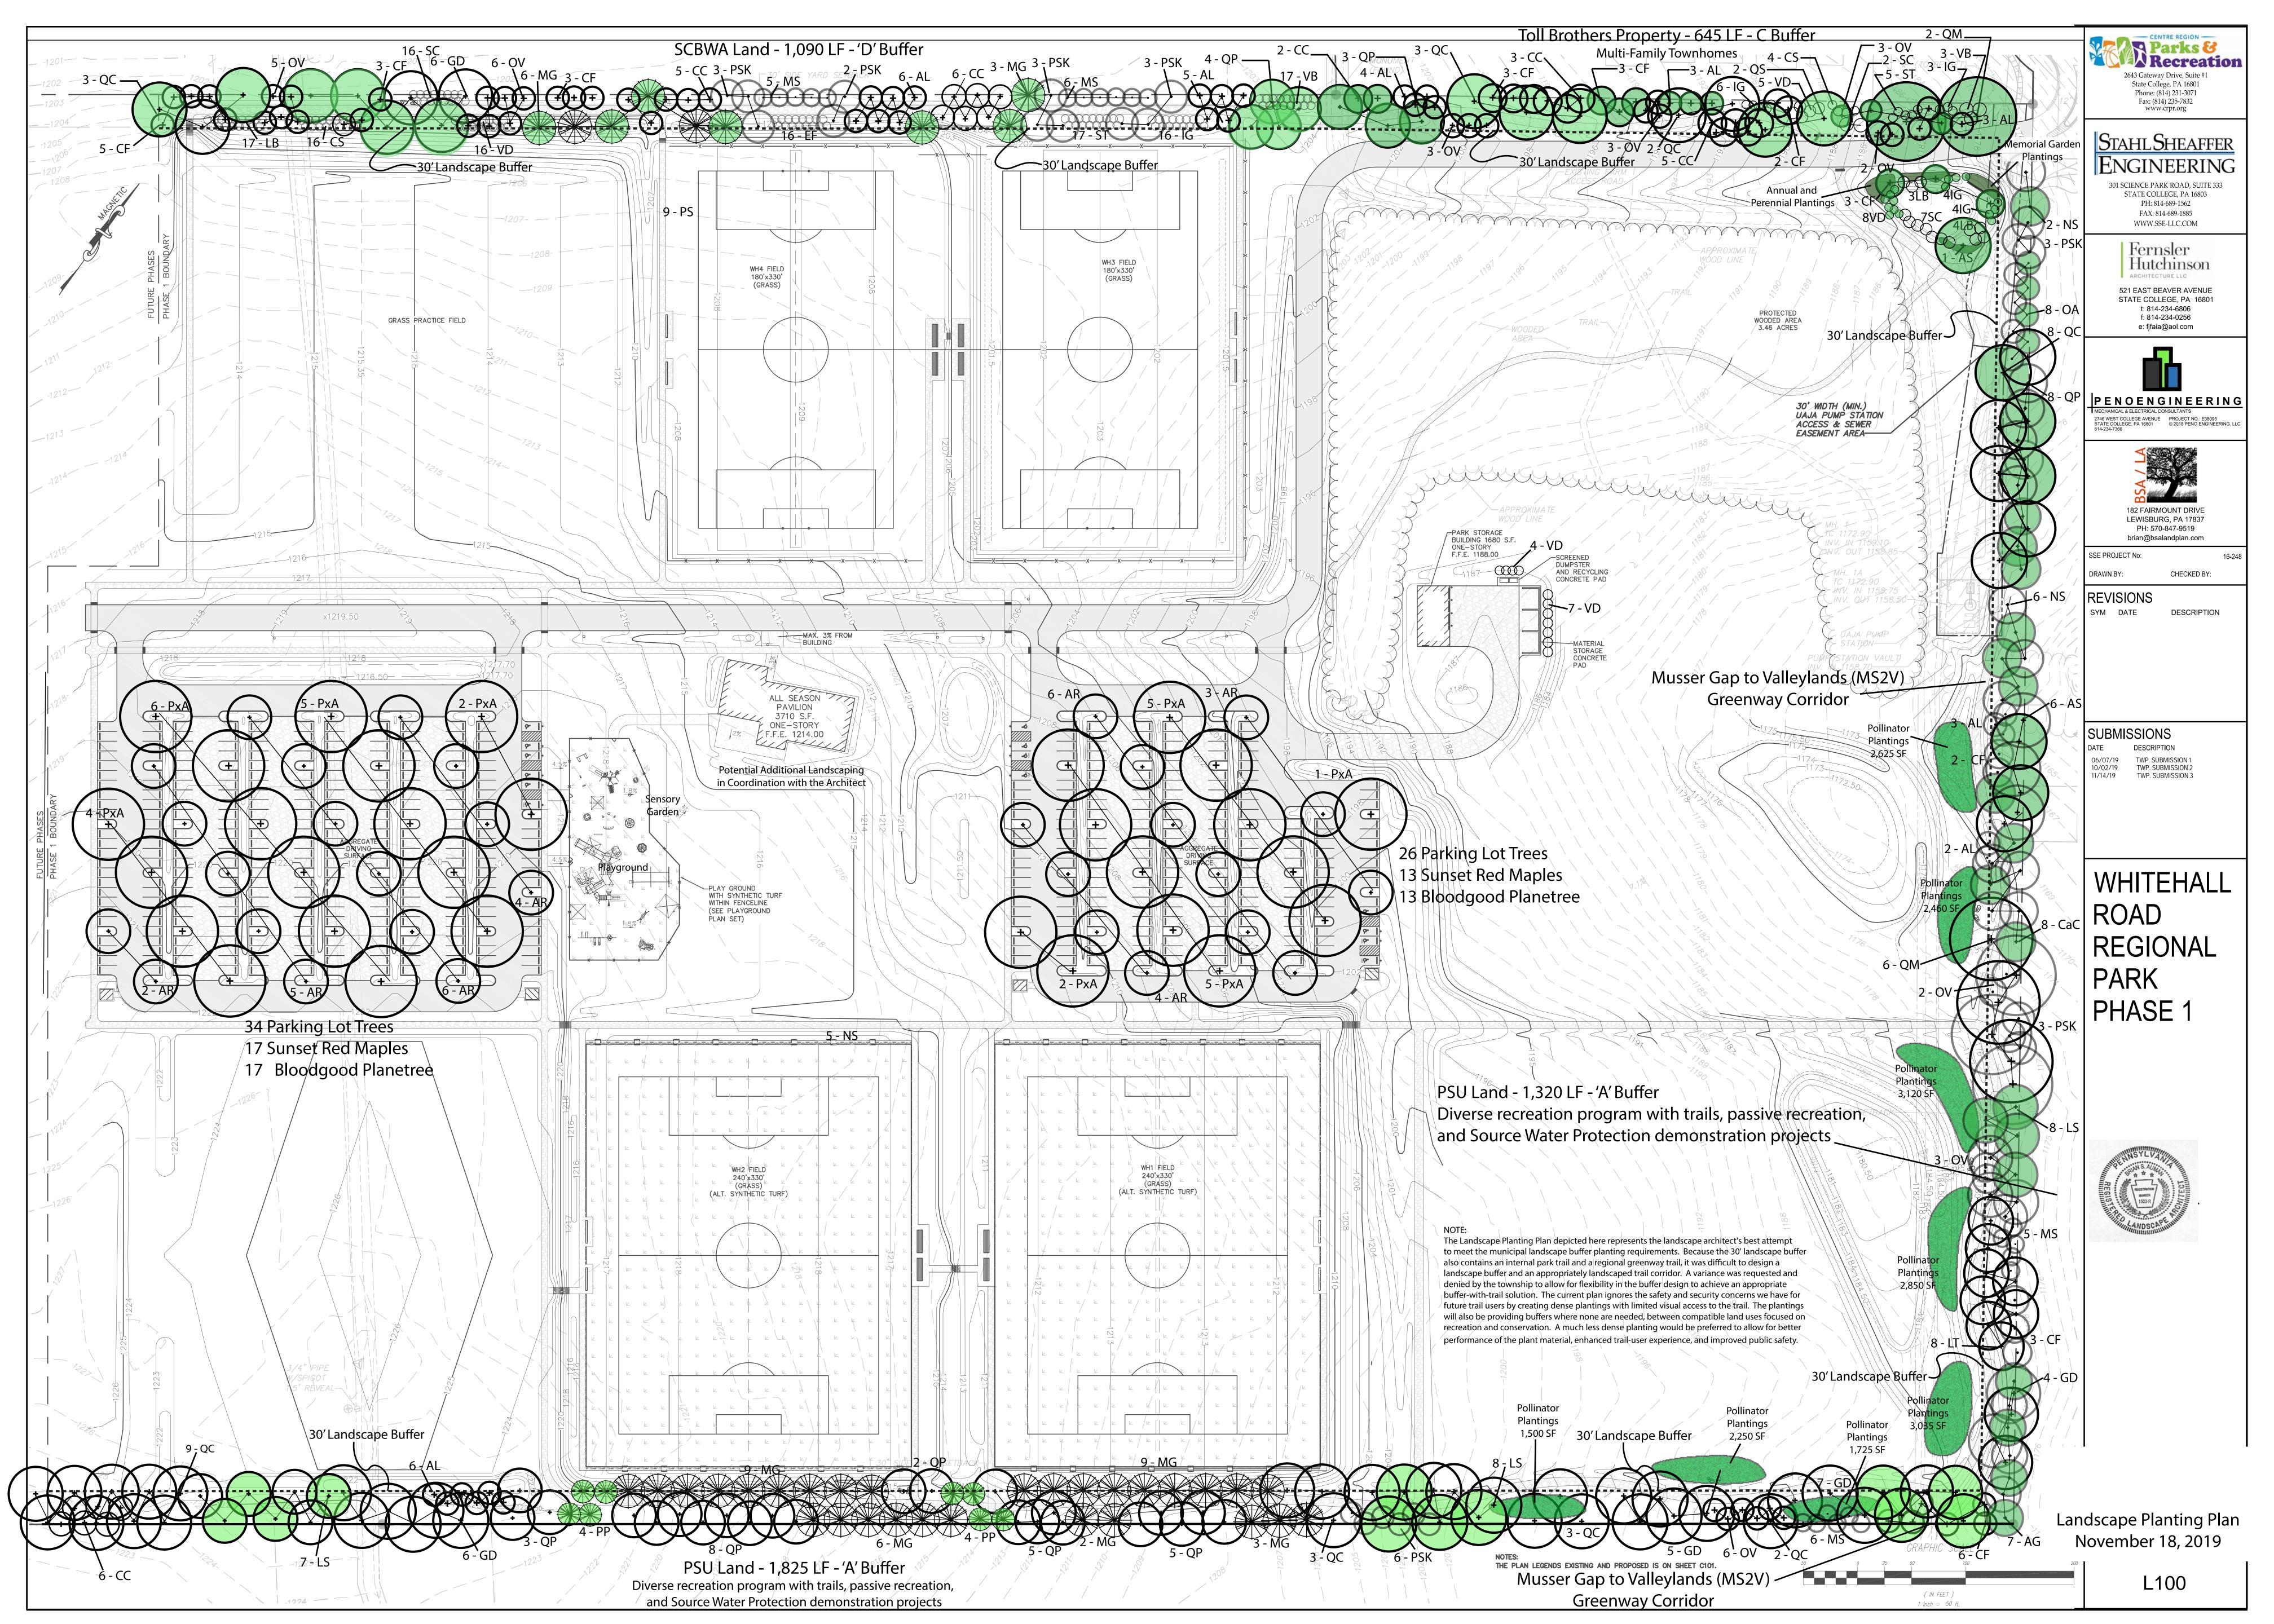

TRAFFIC SHALL NOT BE PERMITTED TO CROSS COMPOST FILTER SOCKS.

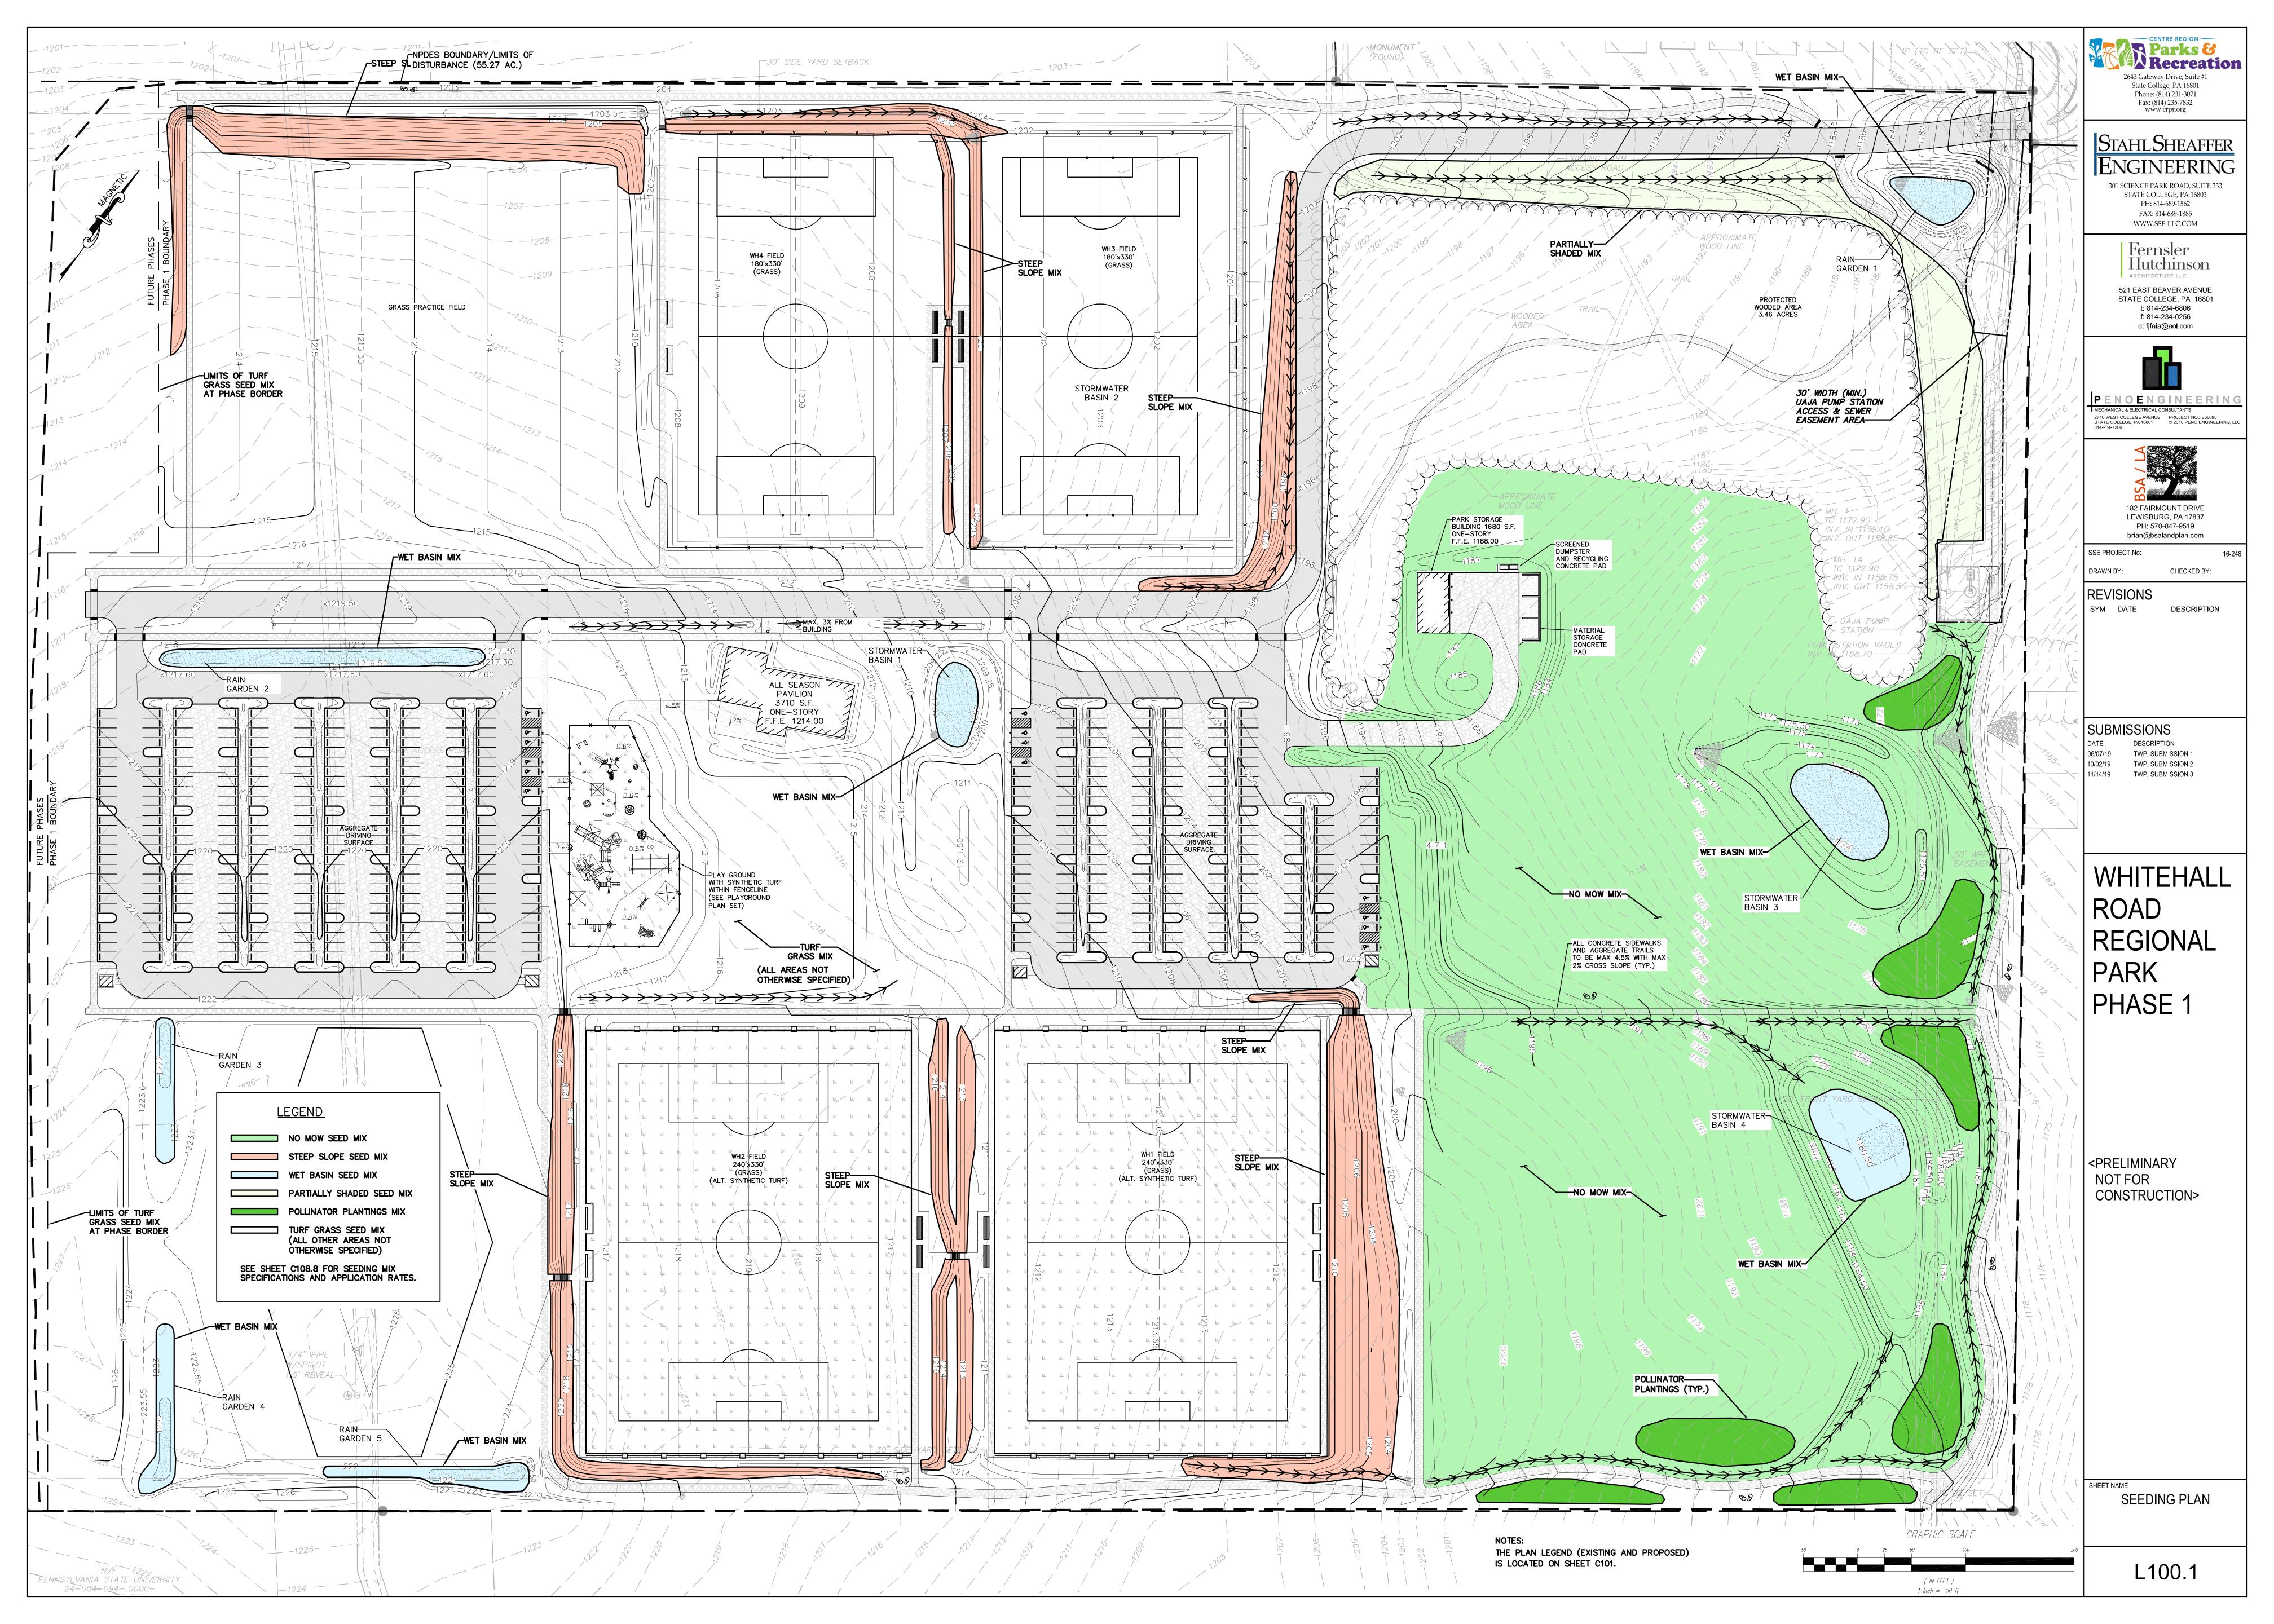

BE REPLACED ACCORDING TO MANUFACTURER'S RECOMMENDATIONS.

OR REPLACED WITHIN 24 HOURS OF INSPECTION.

BARRIER ALIGNMENT. MAXIMUM SLOPE LENGTH ABOVE ANY BARRIER SHALL NOT EXCEED THAT

### NOTE:

Red Sunset Red Maple

The Landscape Planting Plan depicted here represents the landscape architect's best attempt to meet the municipal landscape buffer planting requirements. Because the 30' landscape buffer also contains an internal park trail and a regional greenway trail, it was difficult to design a landscape buffer and an appropriately landscaped trail corridor. A variance was requested and denied by the township to allow for flexibility in the buffer design to achieve an appropriate buffer-with-trail solution. The current plan ignores the safety and security concerns we have for future trail users by creating dense plantings with limited visual access to the trail. The plantings will also be providing buffers where none are needed, between compatible land uses focused on recreation and conservation. A much less dense planting would be preferred to allow for better performance of the plant material, enhanced trail-user experience, and improved public safety.

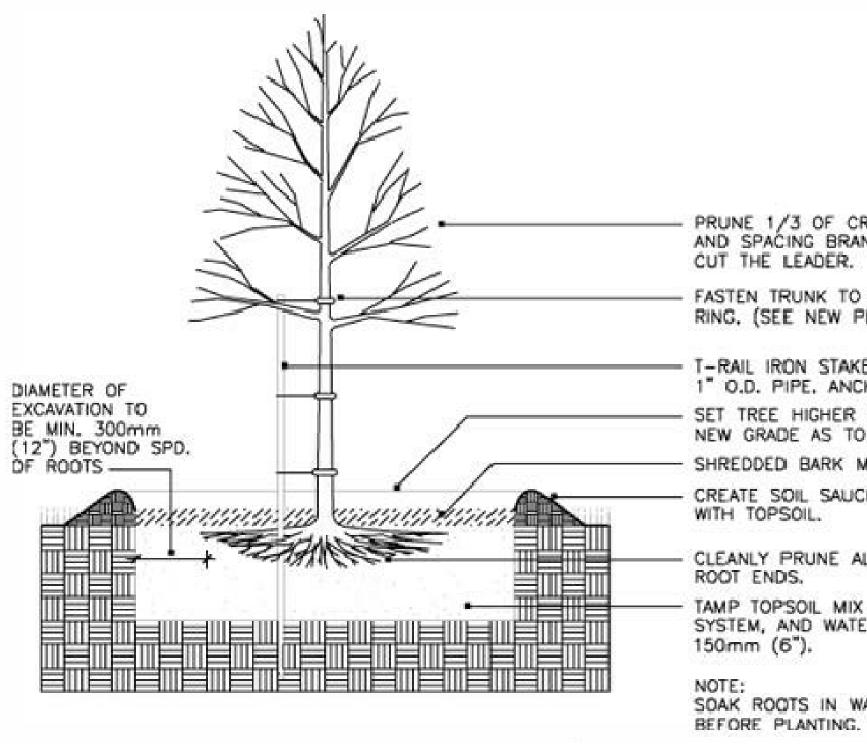

- FASTEN TRUNK TO STAKE WITH FABRIC TREE RING - IF REQUIRED LOCATE ANCHOR STAKE 18" AWAY FROM TREE TRUNK ON SIDE OF PREVAILING WIND, T-RAIL IRON STAKE OR ACCEPTABLE WOODEN SUBSTITUTE, ANCHOR FIRMLY,

CROWN OF ROOT BALL SHALL BEAR SAME RELATION (OR SLIGHTLY ABOVE) TO FINISHED GRADE AS IT BORE TO PREVIOUS GRADE. - SHREDDED BARK MULCH 75mm (3") MIN. - CREATE SOIL SAUCER WITH TOPSOIL 150mm (6") MIN.

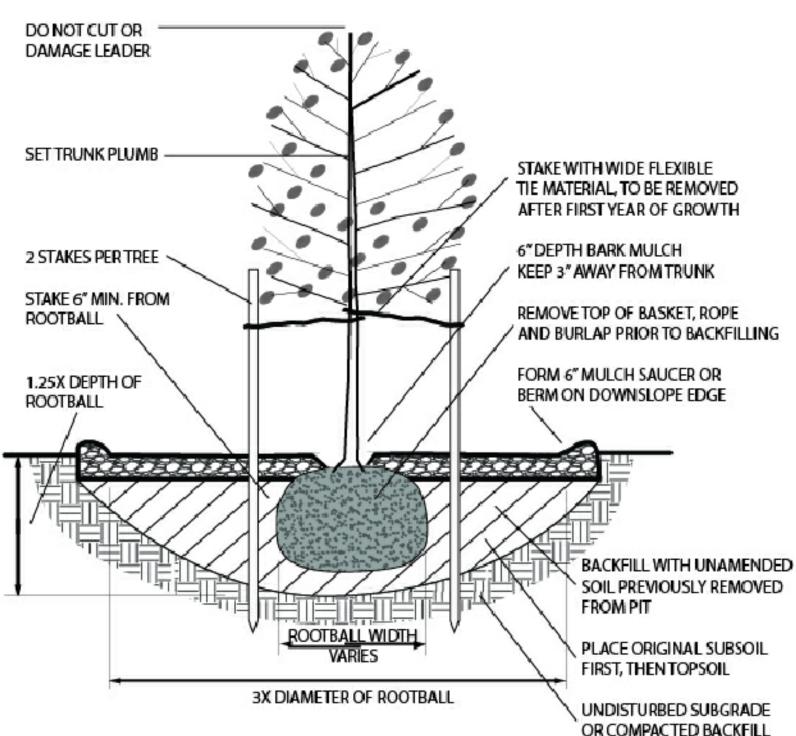

- CUT AND REMOVE TOP 1/3 OF BURLAP IF NON-BIODEGRADABLE WRAP IS USED. REMOVE TOTALLY. - PREPARED TOPSOIL MIX OR CLEAN SUBSOIL - COMPACT SUBSOIL TO FORM PEDESTAL AND PREVENT SETTLING. NOTE:

1. STAKE ONLY ON WINDY SITES

### EVERGREEN TREE PLANTING DETAIL N.T.S.

UNDERSTORY TREE (BARE ROOT) PLANTING DETAIL

NOTES: 1. TREE SHALL BE MARKED ON ITS NORTH FACING SIDE AT NURSERY. TREE SHALL BE PLANTED

- WITH ORIGINAL NORTH FACING SIDE FACING NORTH ON SITE. REMOVE AND SEPARATE TOPSOIL AND SUBSOIL FROM PLANTING HOLE FOR USE AS BACKFILL. 3. IF ROOTBALL IS PACKAGED IN 'PLASTIC BURLAP' OR TREATED BURLAP, REMOVE BURLAP COMPLETELY.
- 4. HEAL-IN SOIL AROUND THE ENTIRE ROOTBALL TO ELIMINATE AIR POCKETS.
- 5. WATER AFTER PLANTING AND AS NECESSARY UNTIL ESTABLISHED.
- PLANT SHRUBS IN SPRING (APRIL MAY) OR FALL (SEPTEMBER EARLY OCTOBER). 7. DO NOT DAMAGE MAIN ROOTS OR ROOT BALL WHEN INSTALLING TREE STAKES.
- ALL STAKES, GUYWIRES, AND TIES TO BE REMOVED AFTER THE FIRST YEAR OF GROWTH,
  - UNLESS OTHERWISE SPECIFIED BY THE LANDSCAPE ARHICTECT.

PRUNE 1/3 OF CROWN BY THINNING AND SPACING BRANCHES. DO NOT FASTEN TRUNK TO STAKE WITH FABRIC TREE RING. (SEE NEW PLANTING TECHNIQUES)

T-RAIL IRON STAKE OR GALVANIZED 1" O.D. PIPE, ANCHOR FIRMLY. SET TREE HIGHER IN RELATION TO NEW GRADE AS TO PREVIOUS GRADE. SHREDDED BARK MULCH (MIN. 2") CREATE SOIL SAUCER (MIN. 6")

CLEANLY PRUNE ALL DAMAGED

TAMP TOPSOIL MIX AROUND ROOT SYSTEM, AND WATER IN LAYERS OF

SOAK ROOTS IN WATER OVERNIGHT

# Notes:

1- Trees shall be of quality prescribed in crown observations and root observations details and specifications.

2- See specifications for further requirements related to this detail.

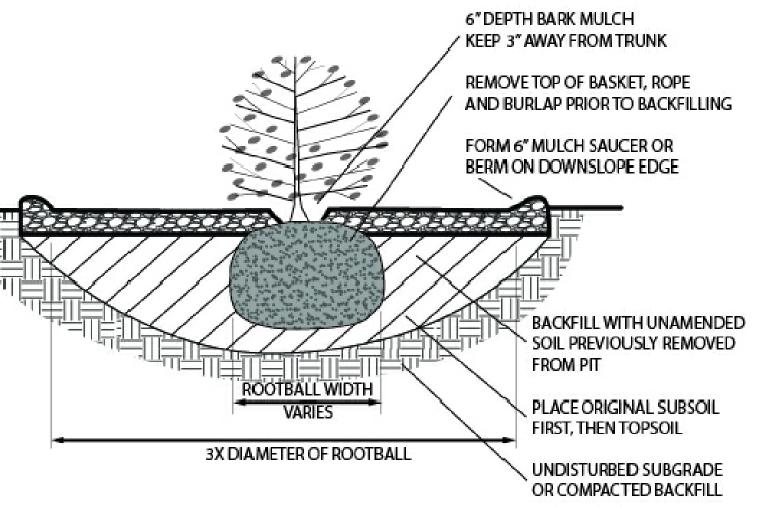

> Trunk caliper shall meet ANSI Z60 current edition for root ball size.

Root ball modified as required.

Round-topped soil berm 4" high x 8" wide above root ball surface shall be centered on the downhill side of the root ball for 240°. Berm shall begin at root ball periphery.

4" layer of mulch. No more than 1" of mulch on top of root ball. (See specifications for mulch).

Existing soil.

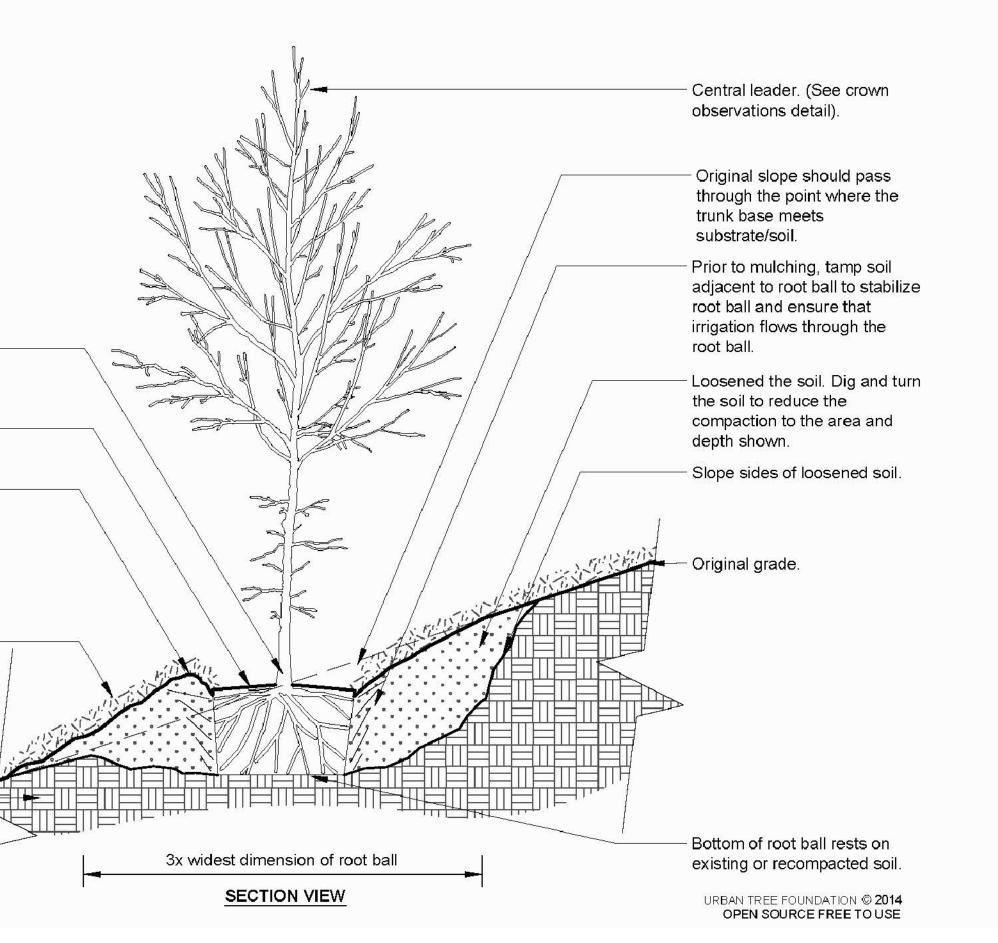

NOTES: 1. REMOVE AND SEPARATE TOPSOIL AND SUBSOIL FROM PLANTING HOLE FOR USE AS BACKFILL. REMOVE TOP OF BASKET, ROPE AND BURLAP PRIOR TO BACKFILLING. 3. IF ROOTBALL IS PACKAGED IN 'PLASTIC BURLAP' OR TREATED BURLAP, REMOVE BURLAP

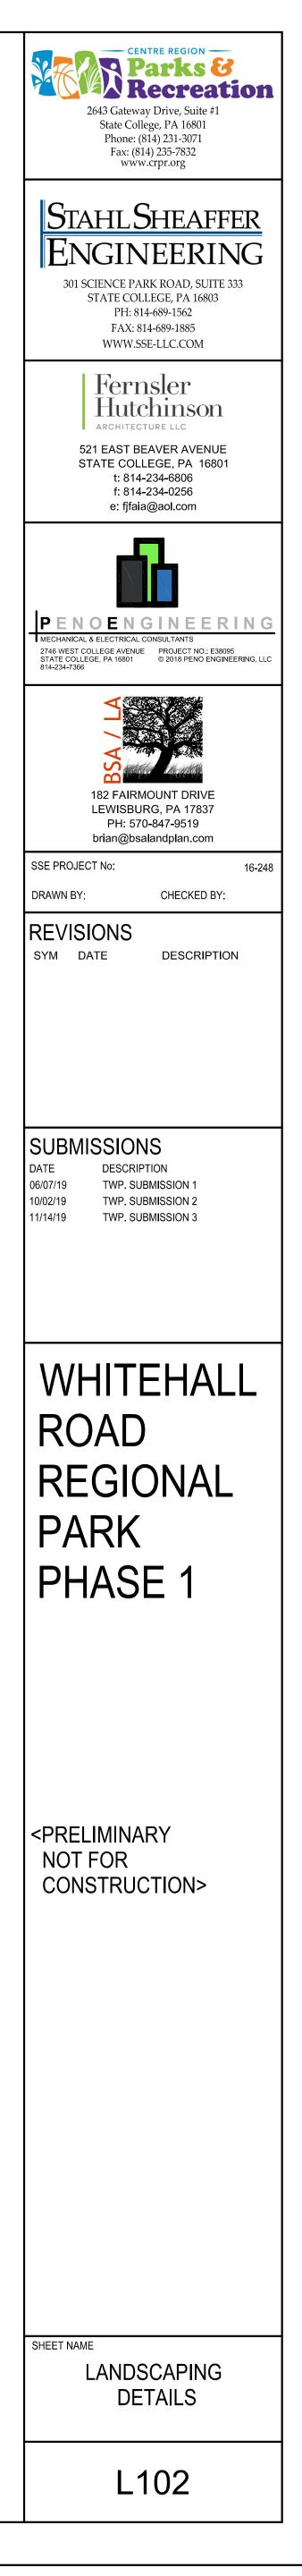

COMPLETELY. 4. HEAL-IN SOIL AROUND THE ENTIRE ROOTBALL TO ELIMINATE AIR POCKETS. WATER AFTER PLANTING AND AS NECESSARY UNTIL ESTABLISHED.

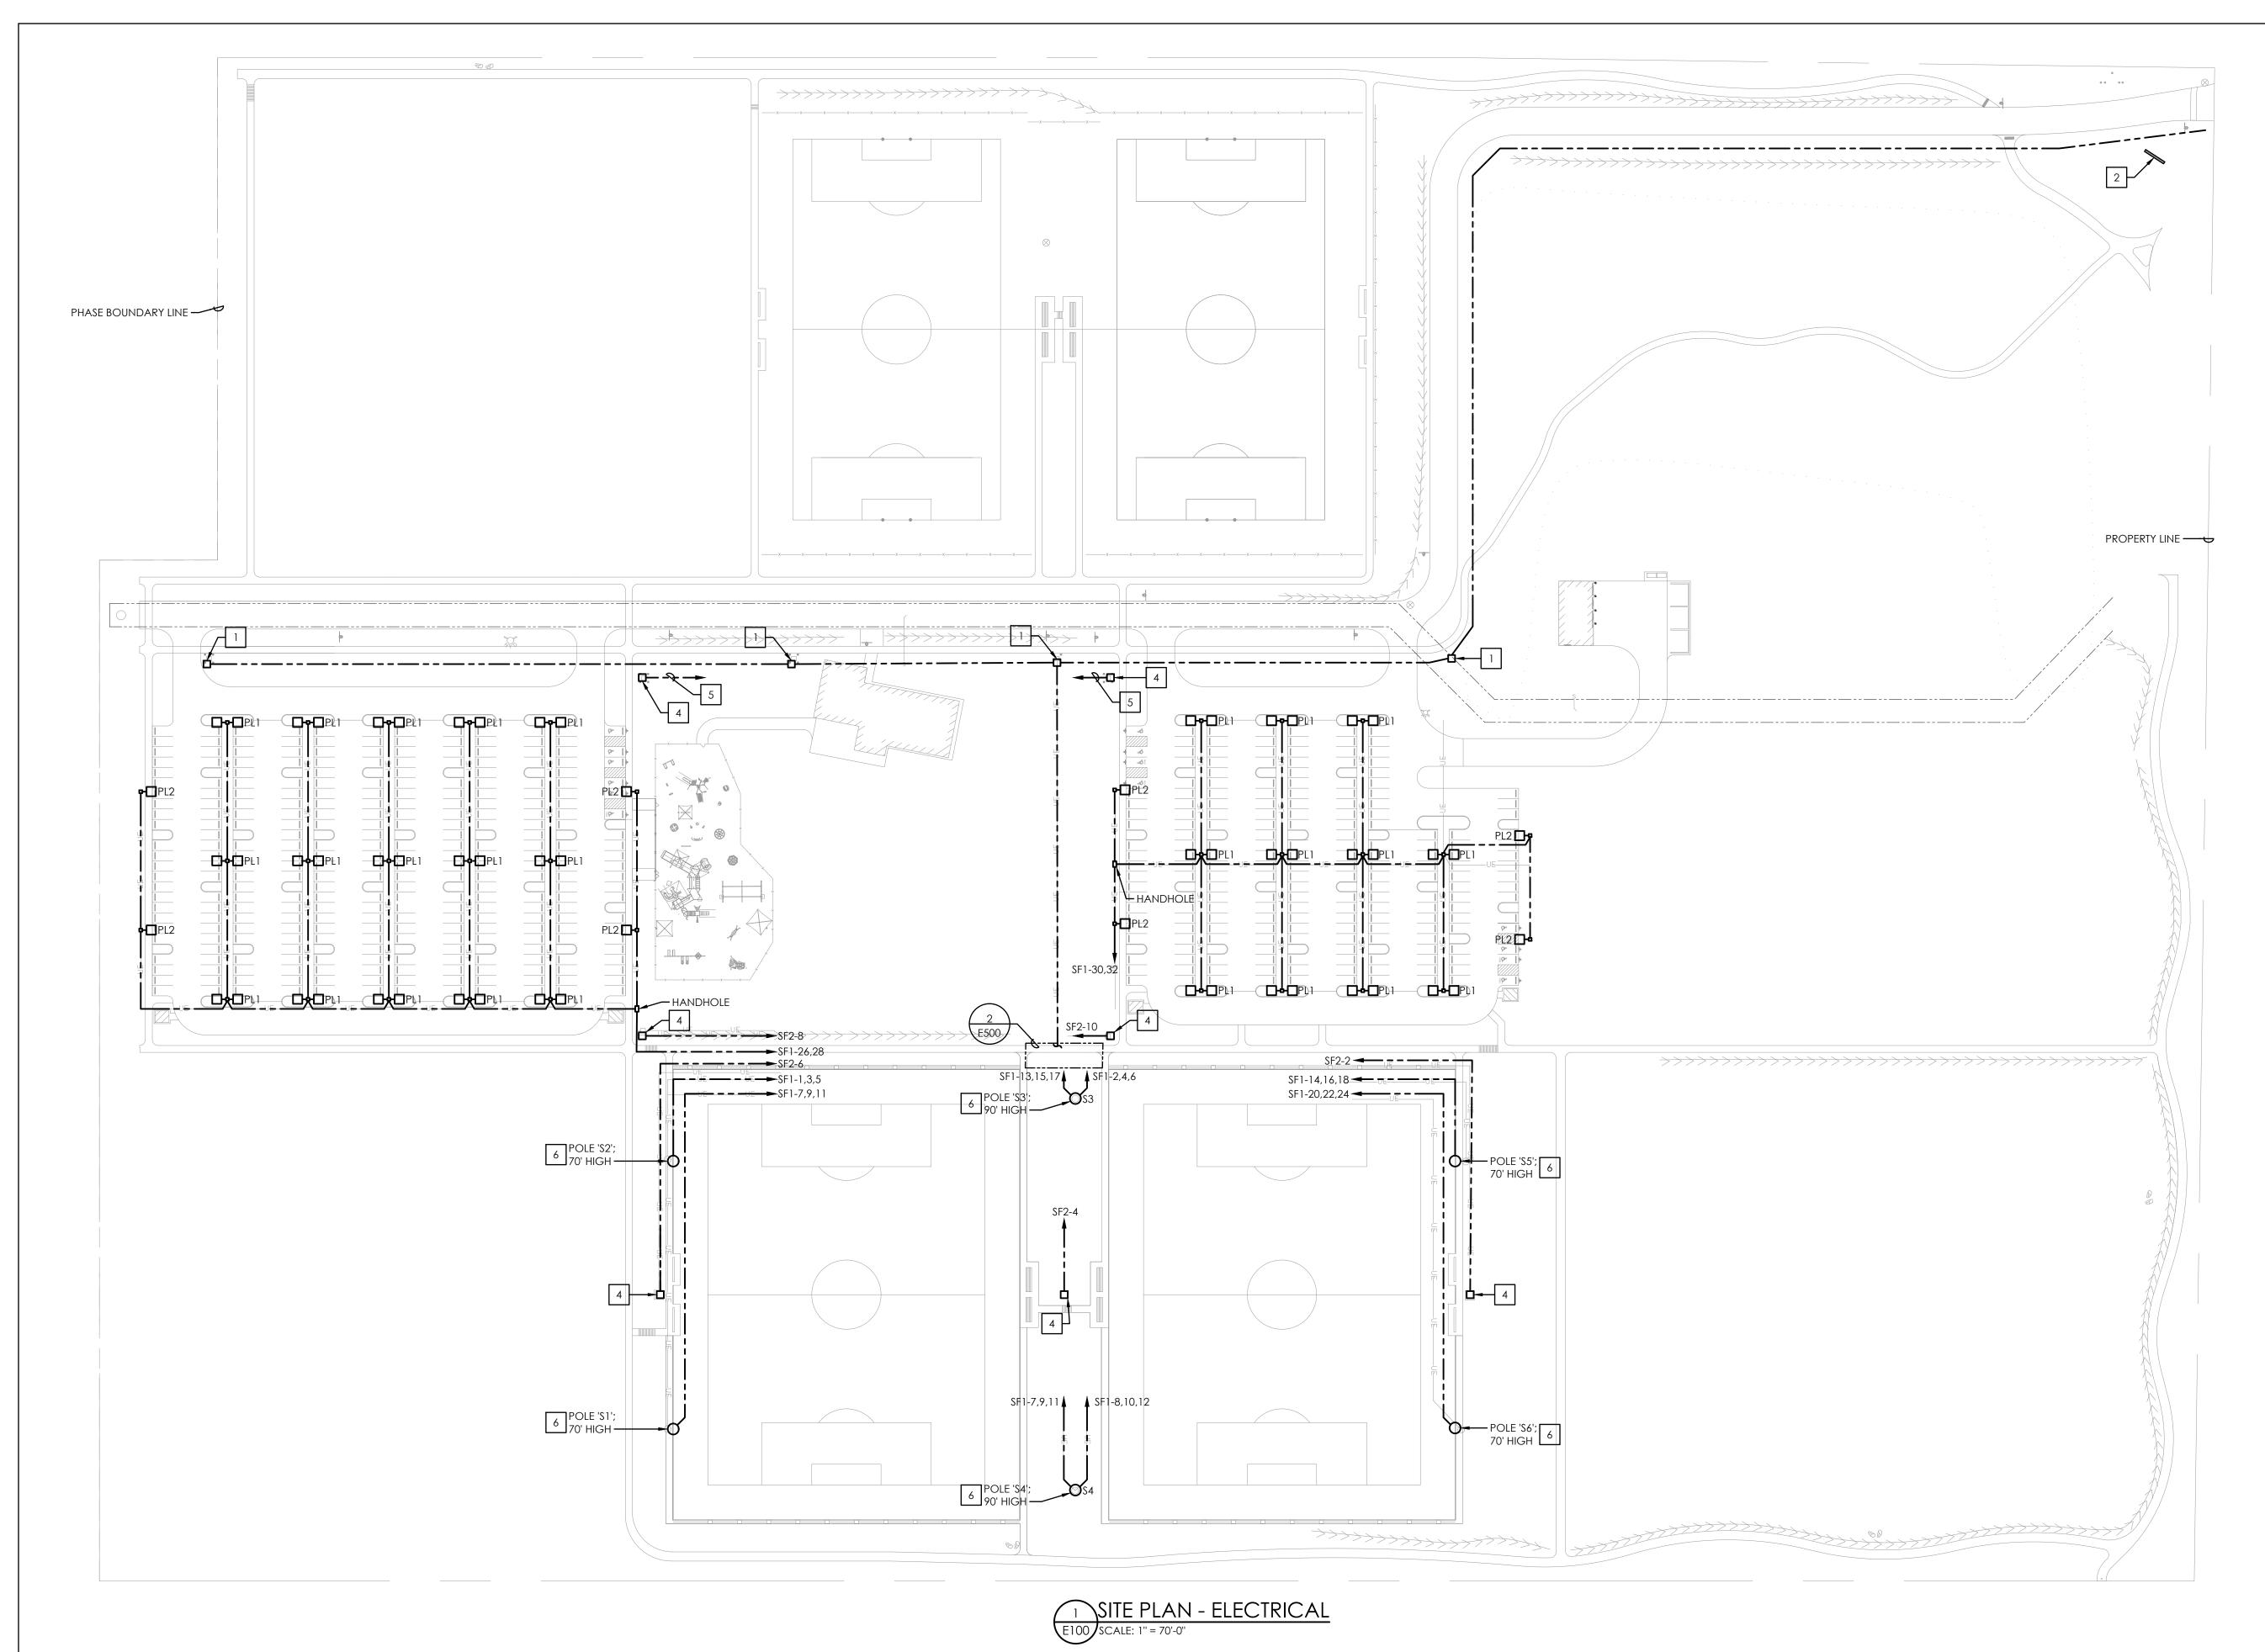

6. PLANT SHRUBS IN SPRING (APRIL - MAY) OR FALL (SEPTEMBER - EARLY OCTOBER).

DEMAND FACTOR: 100.0 %														DEMAND FACTOR: 100.0 %		

TOTAL CONNECTED: 145.5 kVA 175.0 A TOTAL DEMAND: 145.5 kVA 175.0 A

# GENERAL NOTES:

- 1. ALL UNDERGROUND BRANCH CIRCUITING SHALL BE INSTALLED IN 1-1/4" MINIMUM PVC SCHEDULE 80 CONDUIT.
- 2. CONDUIT ROUTINGS SHOWN ON PLAN ARE DIAGRAMMATIC. DETERMINE EXACT ROUTING IN FIELD.

# KEY NOTES:

- 1. ELECTRICAL UTILITY SWITCH AND COMMUNICATIONS SERVICE PEDESTAL.
- 2. ILLUMINATED FACILITY SIGN. FURNISH AND INSTALL ELECTRICAL UTILITY METER AND FUSED DISCONNECT.
- 3. UNDERGROUND ELECTRICAL UTILITY PRIMARY AND COMMUNICATIONS SERVICE DUCTBANK.
- 4. RECEPTACLE PEDESTAL/BOLLARD.
- 5. CIRCUIT SHALL ORIGINATE IN PAVILLION BUILDING.
- 6. POLE AND LIGHTING FIXTURES INSTALLED BY SPORTS LIGHTING MANUFACTURER. BASIS OF DESIGN IS BY MUSCO, UTILIZING THEIR ADJUSTABLE TLC-LED-1150 HEADS.

## GENERAL REQUIREMENTS

- A. GENERAL: 1. THESE DRAWINGS ARE DIAGRAMMATIC IN NATURE AND DO NOT NECESSARILY SHOW ALL OFFSETS AND FITTINGS THAT WILL BE REQUIRED. COORDINATE CAREFULLY WITH EXISTING UTILITIES, EQUIPMENT AND
- STRUCTURE. 2. IT IS THE GENERAL INTENT OF THESE DRAWINGS AND SPECIFICATIONS THAT THE CONTRACTOR FURNISH AND INSTALL A COMPLETE AND WORKABLE ELECTRICAL SYSTEM IN COMPLIANCE WITH ALL APPLICABLE CODES AND REGULATIONS AND TO THE SATISFACTION OF THE ARCHITECT, ENGINEER AND OWNER.
- 3. CONTRACTOR IS RESPONSIBLE FOR VERIFICATION OF ALL FIELD CONDITIONS PRIOR TO PLACING BID, PURCHASING EQUIPMENT OR MATERIALS AND COMMENCEMENT OF ANY WORK. NOTIFY ENGINEER OF
- ANY DISCREPANCIES FOR RESOLUTION. 4. REPORT ANY OBSERVED CODE VIOLATIONS OF EXISTING SYSTEMS TO ENGINEER.
- 5. THE CONTRACTOR SHALL FURNISH, TO THE JOBSITE, AND INSTALL ALL EQUIPMENT AND MATERIALS SPECIFIED IN THE TECHNICAL SECTIONS OF THIS SPECIFICATION. THE INSTALLATION SHALL INCLUDE ALL ACCESSORIES REQUIRED TO ASSURE A COMPLETE AND WORKABLE INSTALLATION.
- 6. THE WORK SHALL INCLUDE THE FURNISHING OF ALL LABOR, MATERIALS, TOOLS, EQUIPMENT, TRANSPORTATION, PERMITS, INSPECTION FEES, SERVICES AND ALL NECESSARY RELATED ITEMS REQUIRED FOR A COMPLETE AND OPERATIONAL SYSTEM.
- 7. BEFORE SUBMITTAL OF BID, THOROUGHLY EXAMINE THE SITE. NO CLAIM FOR EXTRA COMPENSATION WILL BE RECOGNIZED IF DIFFICULTIES ARE ENCOUNTERED WHICH AN EXAMINATION OF SITE CONDITIONS, PRIOR TO EXECUTING CONTRACT WOULD HAVE REVEALED.
- B. CODE AND REGULATIONS: THE ENTIRE INSTALLATION SHALL CONFORM WITH ALL PERTINENT ORDINANCES, CODES AND REGULATIONS OF THE NATIONAL FIRE PROTECTION ASSOCIATION, THE 2008 VERSION OF THE NATIONAL ELECTRICAL CODE (NEC) AND OTHER REGULATORY BODIES HAVING JURISDICTION OVER THIS CLASS OF WORK.
- C. COORDINATION: ELECTRICAL CONTRACTOR SHALL SCHEDULE AND COORDINATE ALL ELECTRICAL OUTAGES WITH THE OWNER, A MINIMUM OF TWO WEEK (14-DAYS) PRIOR TO SHUTDOWN.
- D. SHOP DRAWINGS AND PRODUCT DATA
- 1. ALL EQUIPMENT MATERIALS SHALL BE AS SPECIFIED HEREIN. 2. THE FOLLOWING MATERIALS AND EQUIPMENT SHALL BE SUBMITTED:

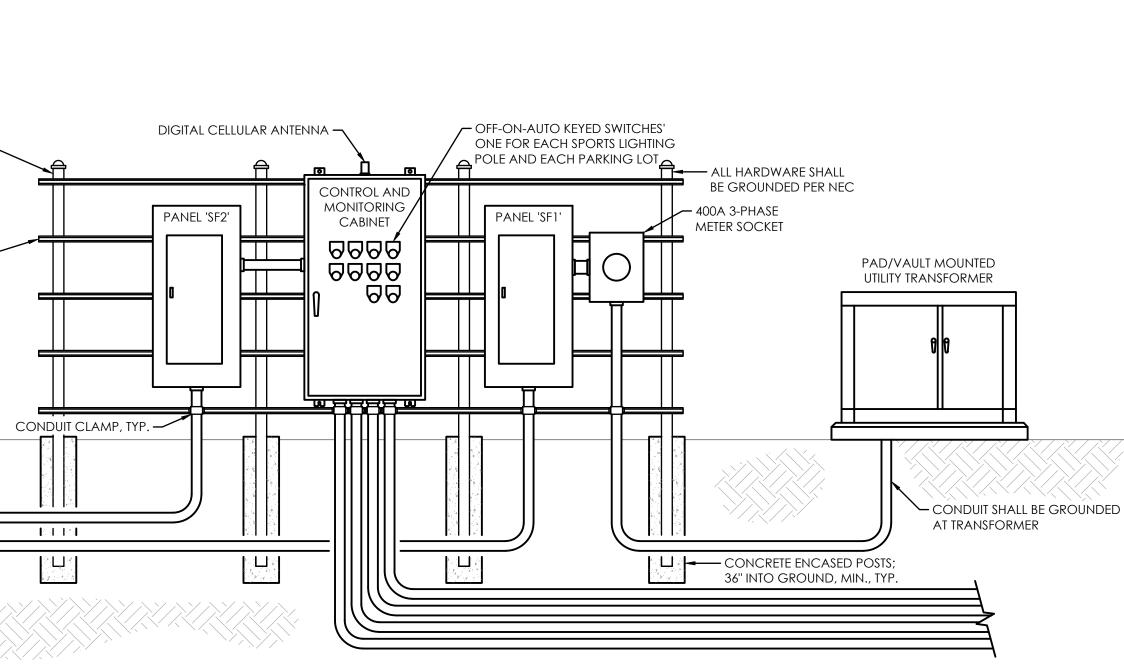

- a. FIRESTOPPING MATERIALS. b. TRANSFORMERS.
- c. SERVICE SWITCHES AND GANG METERS. d. PANELBOARDS & CIRCUIT BREAKERS.
- e. DISCONNECT SWITCHES. f. LIGHTING FIXTURES AND LAMPS.
- g. DEVICES, FACEPLATES AND BOXES. h. RECEPTACLES. i. LIGHTING SWITCHES AND CONTROLS
- k. BUILDING POWER WIRING AND CONDUIT.
- NOTIFICATION APPLIANCES, ETC.).
- ITEMS THAT SHALL BECOME DEFECTIVE WITHIN THE STATED TIME. F. REMOVAL OF RUBBISH: PERIODICALLY AND AT THE COMPLETION OF THE WORK CONTEMPLATED UNDER THESE SPECIFICATIONS, THE CONTRACTOR SHALL REMOVE FROM THE BUILDING AND SITE ALL RUBBISH AND ACCUMULATED MATERIALS OF WHATEVER NATURE NOT CAUSED BY OTHER
  - ACCEPTABLE CONDITION.
  - G. MATERIALS AND EQUIPMENT: ALL EQUIPMENT OR APPARATUS OF ANY ONE SYSTEM MUST BE THE PRODUCT OF ONE MANUFACTURER, OR EQUIVALENT PRODUCTS OF A NUMBER OF MANUFACTURERS WHICH ARE SUITABLE FOR USE IN A UNIFIED OR ASSEMBLED SYSTEM. ALL MATERIALS AND EQUIPMENT TO BE FURNISHED UNDER THIS CONTRACT SHALL BE NEW.
- FINISHED - ROADWAY STRUCTURE, BY OTHERS GRADE - DETECTABLE WARNING TAPE, (6" MIN. WIDTH) AT 12" BELOW FINISHED GRADE COMPACTED 2A AGGREGATE (100%) 30" MIN. PROCTOR) FROM ABOVE LIMESTONE SCREENING UP TO LOAD SUBBASE 12" MIN.FINE LIMESTONE SCREENING IN 6" TAMPENED LAYERS AAAAAAAAAAAA ▶ \_\_\_\_\_ ♦ \_\_\_\_ • \_\_\_ • \_\_\_ • \_\_\_ • \_\_\_ 3000 PSI CONCRETE; 6" MIN. (1) 4" CONDUIT FOR COMMUNICATIONS SERVICE AND (2) 5" CONDUITS FOR

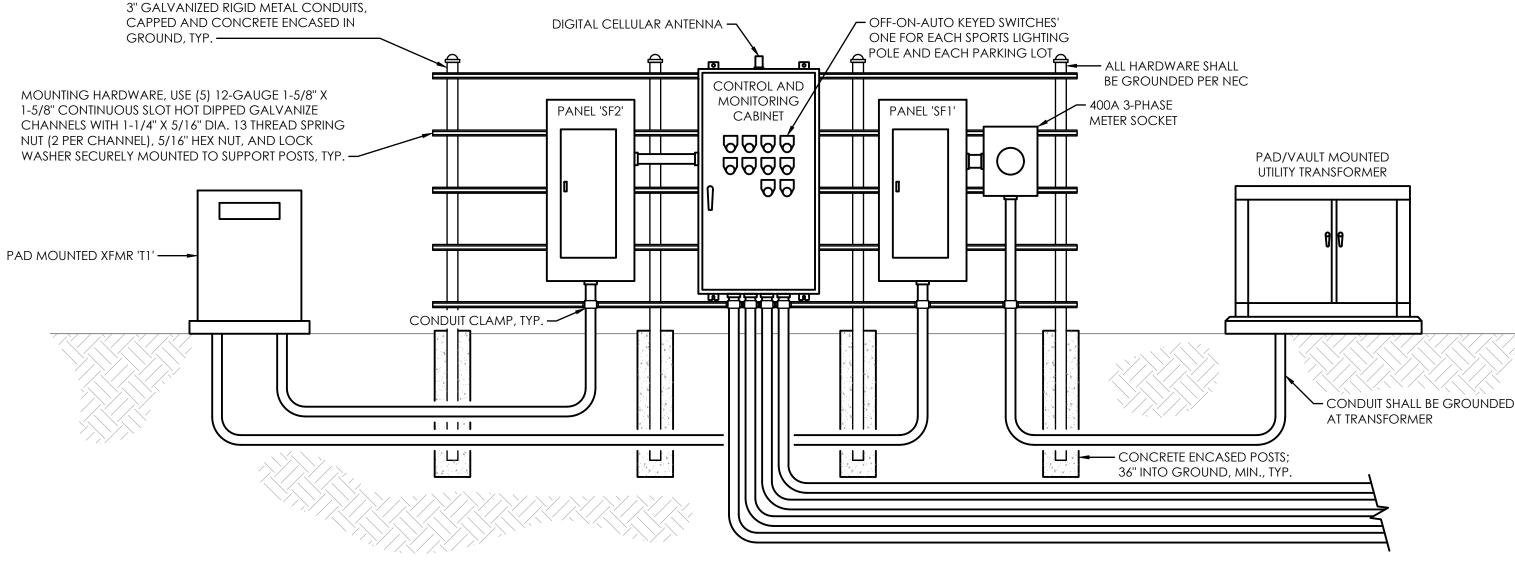

UNDER VEHICLE PATHWAYS

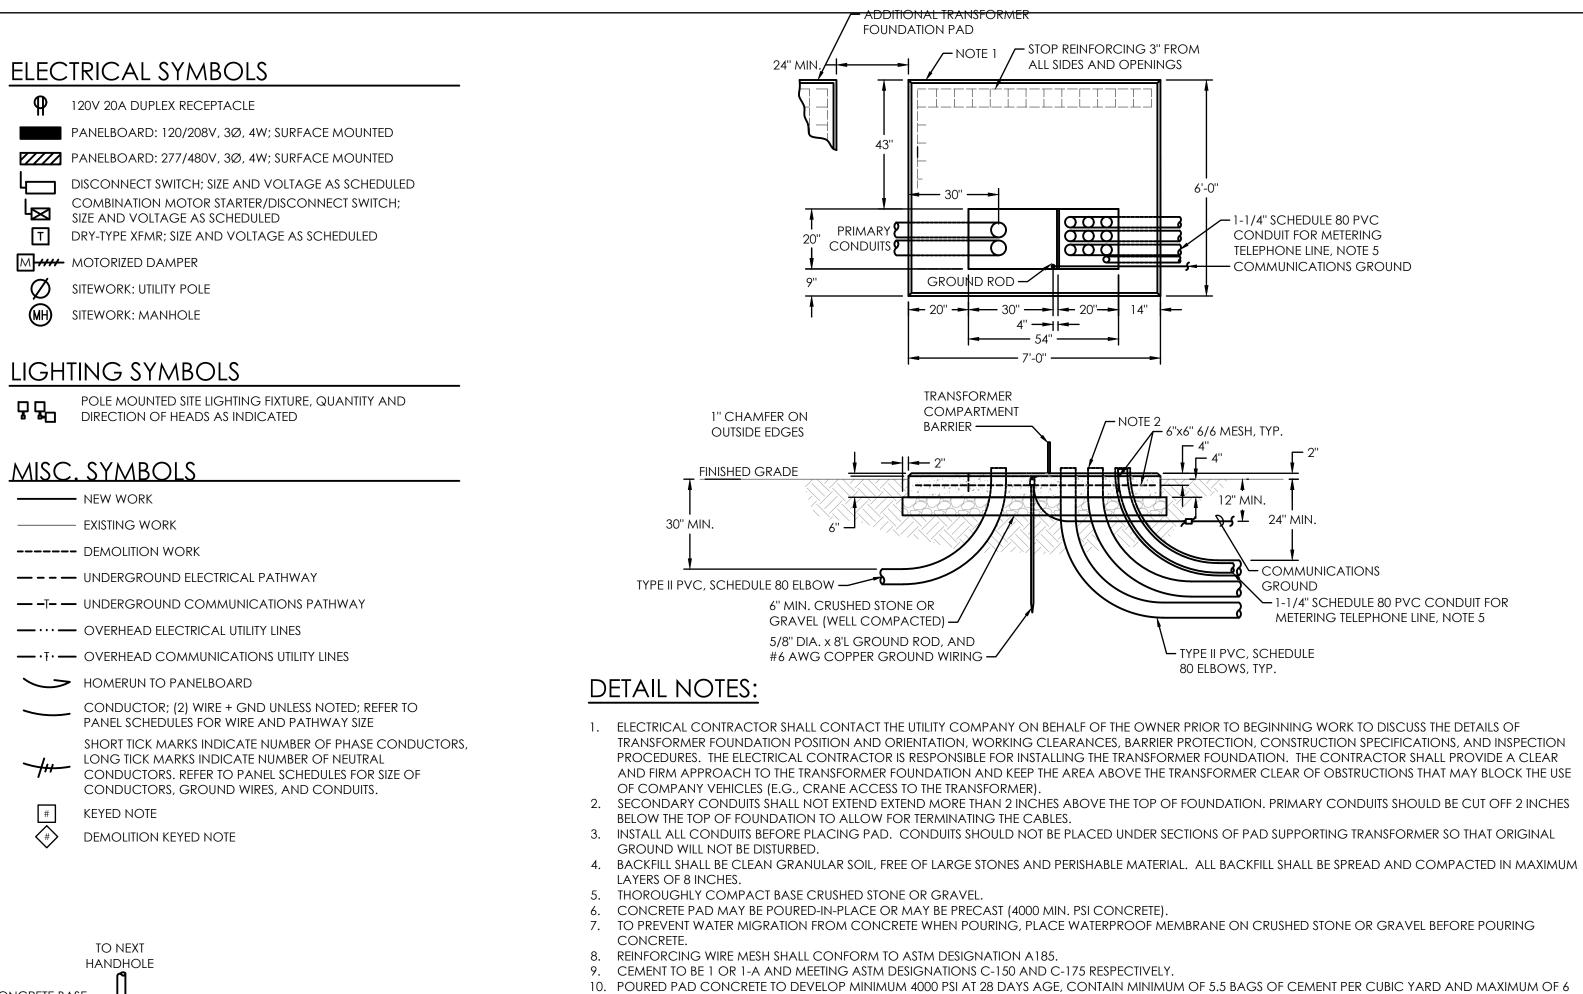

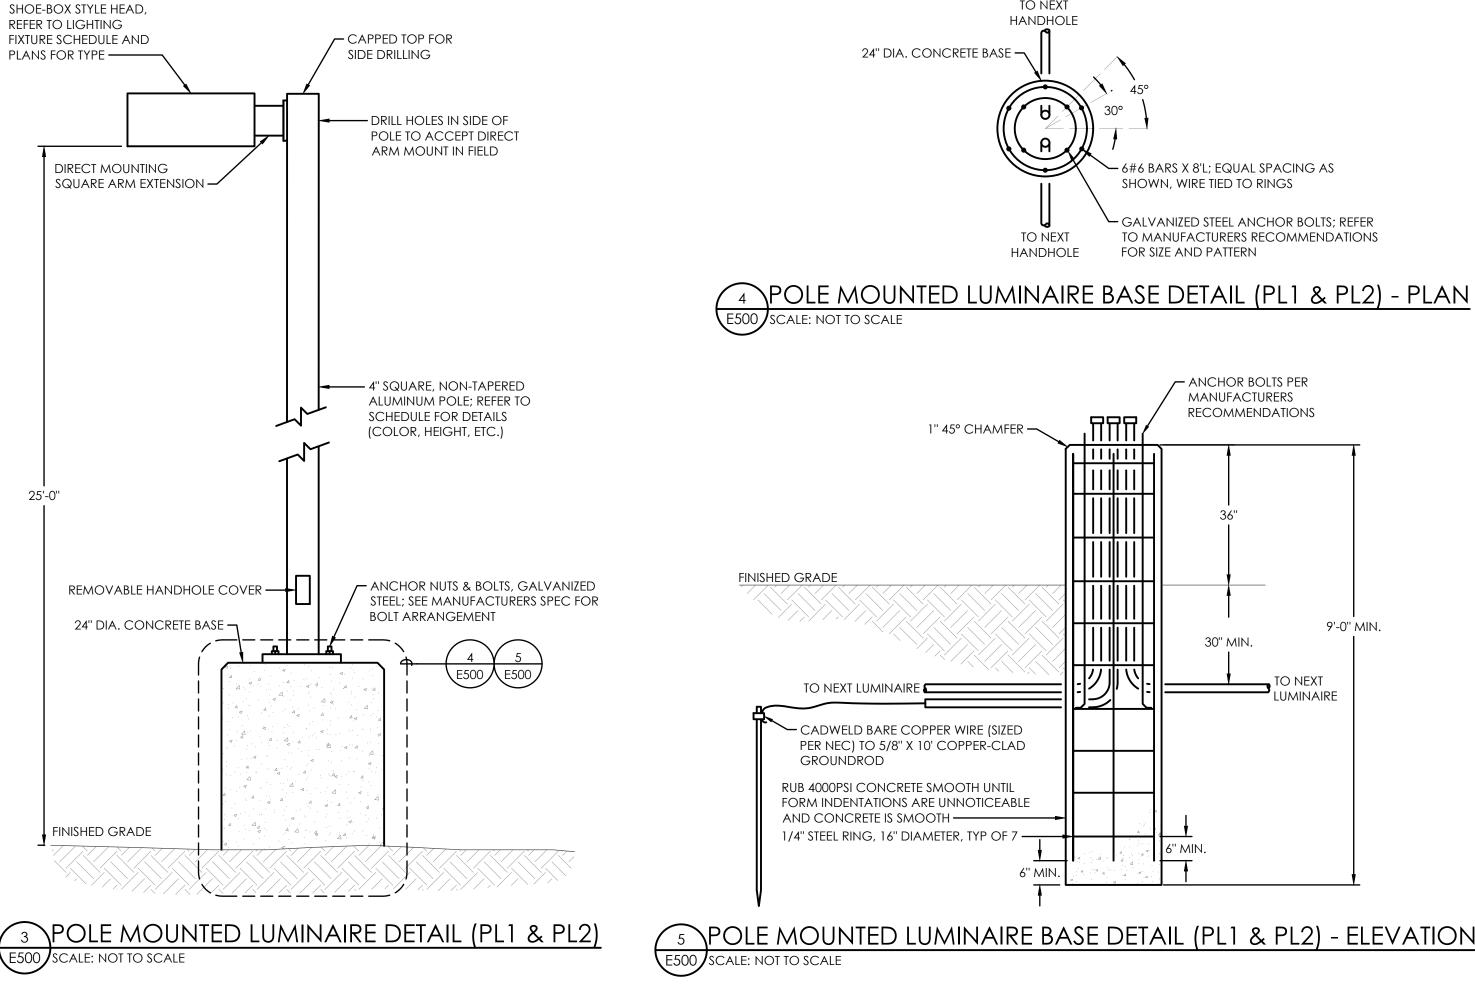

E500 SCALE: NOT TO SCALE

- j. TELECOMMUNICATIONS OUTLETS & CABLING
- I. FIRE ALARM SYSTEM AND COMPONENTS (DETECTION AND
- E. GUARANTEE: THE ENTIRE INSTALLATION SHALL BE GUARANTEED FOR A PERIOD OF ONE (1) YEAR FROM DATE OF ACCEPTANCE, BY THE OWNER, UNLESS OTHERWISE SPECIFIED, AGAINST DEFECTS IN MATERIAL AND WORKMANSHIP, IN ACCORDANCE WITH THE TERMS OF THE CONTRACT. GUARANTEE SHALL COVER THE REPLACEMENT, WITHOUT COST TO THE OWNER OF ANY AND ALL
- TRADES, AND SHALL LEAVE THE WORK IN A CLEAN, ORDERLY AND
- H. EQUIPMENT SUPPORTS AND ACCESS: FURNISH AND INSTALL ALL STRUCTURAL STEEL MEMBERS, HANGERS AND SUPPORTS AS REQUIRED FOR SUPPORT OF EQUIPMENT AND MATERIALS (CONDUIT, EQUIPMENT, DEVICES, ETC.) IN ACCORDANCE WITH INDUSTRY STANDARDS. EXTERIOR SUPPORTS SHALL BE

- GALVANIZED STAINLESS STEEL.
- I. FINISH AND ACCESSORIES: THE CONTRACTOR SHALL CAREFULLY INVESTIGATE THE STRUCTURAL WORK AND ALL FINISH CONDITIONS AFFECTING HIS WORK. HE SHALL ARRANGE HIS WORK IN ACCORDANCE WITH SUCH CONDITIONS, FURNISHING ALL ACCESSORIES TO MEET SUCH CONDITIONS.
- J. CUTTING, PATCHING AND PAINTING:
- 1. PROVIDE ALL CUTTING AND PATCHING FOR LINTELS, RECESSES, CHASES, AND MAJOR OPENINGS IN ROOFS, WALLS, FLOORS, CEILINGS, AND PARTITIONS TO RECEIVE CONDUITS, BUS DUCTS, AND EQUIPMENT. 2. PROVIDE ALL CUTTING AND PATCHING FOR MINOR OPENINGS, AND REPAIR ALL DAMAGED AREAS. PAINT SHALL MATCH EXISTING
- SURROUNDINGS 3. ALL CUTTING AND PATCHING SHALL BE DONE IN A NEAT AND
- WORKMANLIKE MANNER BY WORKMEN SKILLED IN THE APPLICABLE TRADE INVOLVED, AND SHALL BE SUBJECT TO THE APPROVAL OF THE ENGINEER/ARCHITECT.
- 4. THE CONTRACTOR SHALL FURNISH AND PLACE ALL SLEEVES REQUIRED FOR CONDUITS, BUS DUCTS, ETC., PASSING THROUGH ROOFS, FLOORS, WALLS, AND CEILINGS ALL ANCHORS AND INSERTS REQUIRED FOR CONDUITS AND EQUIPMENT FURNISHED UNDER THIS CONTRACT. J. FIELD QUALITY CONTROL:
- 1. INSPECTION AND TESTING OF ALL APPLICABLE ELECTRICAL EQUIPMENT SHALL BE DONE IN ACCORDANCE WITH THE LATEST VERSION OF NETA TESTING SPECIFICATIONS.
- 2. PERFORM SYSTEM FUNCTION TESTS UPON COMPLETION OF THE EQUIPMENT TESTS AS OUTLINED. IT IS THE PURPOSE OF THE SYSTEM FUNCTION TESTS TO PROVE THE CORRECT INTERACTION OF ALL SENSING, PROCESS AND ACTION DEVICES.
- K. INSPECTION AND TESTING: ELECTRICAL WORK SHALL BE INSPECTED BY THE CODE OFFICIAL AS PRESCRIBED BY THE MUNICIPALITY THE WORK IS BEING PERFORMED IN.
- L. PROJECT CLOSE-OUT:
- 1. CLEAN ALL WORK AT PROJECT COMPLETION, SUBJECT TO ACCEPTANCE OF OWNER.
- 2. MAINTAIN A RECORD SET OF DRAWINGS SHOWING ALL CHANGES DURING CONSTRUCTION PROCESS. DELIVER THESE RECORD DRAWINGS TO ARCHITECT AT COMPLETION OF PROJECT.

8 SOCCER FIELD ELECTRICAL SERVICE ELEVATION

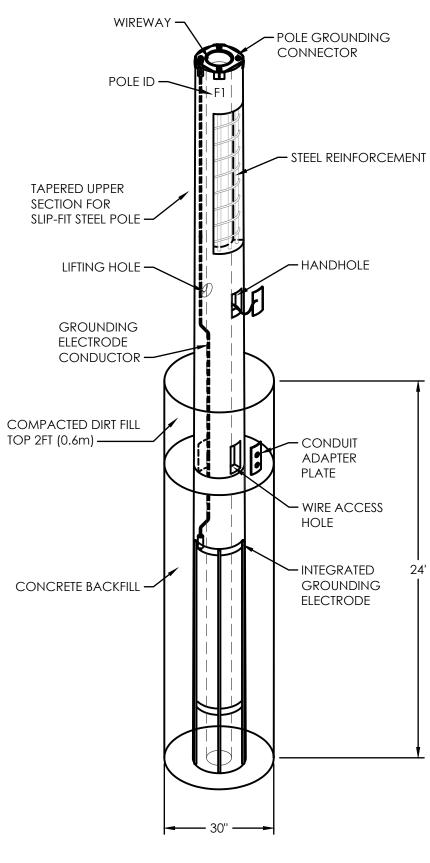

- GALLONS OF WATER PER 94-POUND BAG OF CEMENT, AND CONFORM TO ASTM DESIGNATION C-94. FOURTEEN (14) DAYS MINIMUM DRYING TIME BEFORE TRANSFORMER IS SET. 11. SEAL ALL OPENINGS AROUND CONDUITS WITH GROUT; CAP ALL SPARE CONDUITS TO PREVENT ENTRY OF RODENTS AND ANIMALS INTO TRANSFORMER COMPARTMENT.
- 12. IF CONDUIT EXTENDS INTO BUILDING, IT SHALL BE SEALED (PER NEC) AT BUILDING END TO PREVENT GAS FROM ENTERING BUILDING THROUGH THE CONDUIT. 13. COMMUNICATION GROUND - THE NESC REQUIRES BONDING OF ALL COMMUNICATIONS EQUIPMENT (TELEPHONE, CATV, ETC.) THAT ARE WITHIN SIX (6) FEET OF THE PAD-MOUNTED TRANSFORMER. THE WIRE FOR BONDING COMMUNICATIONS EQUIPMENT SHALL BE MINIMUM #6 AWG SOLID COPPER WIRE THAT IS ATTACHED DIRECTLY TO GROUND ROD, RUNS UNDERNEATH THE CONCRETE PAD, EXTENDS 12 INCHES BEYOND THE EDGE OF THE PAD, AND FINALLY RUNS ALONGSIDE THE PAD FOUNDATION. THE REQUIRED MINIMUM LENGTH OF WIRE IS 8-1/2 FEET.
- 14. IN AREAS WHERE SETTLING MAY OCCUR, INSTALL THREE (3) CONCRETE PIERS, 8-INCH MINIMUM DIAMETER, 36 INCHES DEEP, IN A TRIANGULAR CONFIGURATION UNDER FOUNDATION. ELECTRICAL CONTRACTOR SHALL CONTACT THE COMPANY FOR DETAILS.
